Probability, Econometrics and Truth Hugo A.

Keuzenkamp, 2000-11-02 When John Maynard Keynes likened Jan Tinbergen's early work in econometrics to black magic and alchemy he was expressing a widely held view of a new discipline However even after half a century of practical work and theorizing by some of the most accomplished social scientists Keynes comments are still repeated today This book assesses

the foundations and development of econometrics and sets out a basis for the reconstruction of the foundations of econometric inference by examining the various interpretations of probability theory which underlie econometrics Keuzenkamp claims that the probabilistic foundations of econometrics are weak and although econometric inferences may yield interesting knowledge claims to be able to falsify or verify economic theories are unwarranted Methodological falsificationism in econometrics is an illusion Instead it is argued econometrics should locate itself in the tradition of positivism *Proceedings of the 2nd International and Interdisciplinary Conference on Image and Imagination* Enrico Cicalò, 2020-03-17 This book gathers peer reviewed papers presented at the 1st International and Interdisciplinary Conference on Image and Imagination IMG 2019 held in Alghero Italy in July 2019 Highlighting interdisciplinary and multi disciplinary research concerning graphics science and education the papers address theoretical research as well as applications including education in several fields of science technology and art Mainly focusing on graphics for communication visualization description and storytelling and for learning and thought construction the book provides architects engineers computer scientists and designers with the latest advances in the field particularly in the context of science arts and education
