Conceptual Modeling for Discrete-Event Simulation Stewart Robinson, Roger Brooks, Kathy Kotiadis, Durk-Jouke Van Der Zee, 2010-08-02 Bringing together an international group of researchers involved in military business and health modeling and simulation Conceptual Modeling for Discrete Event Simulation presents a comprehensive view of the current state of the art in the field The book addresses a host of issues including What is a conceptual model How is conceptual modelin Simulation and Modeling of Systems of Systems Pascal Cantot, Dominique Luzeaux, 2013-03-04 Systems engineering is the design of a complex interconnection of many elements a system to maximize a specific measure of system performance It consists of two parts modeling in which each element of the system and its performance criteria are described and optimization in which adjustable elements are tailored to allow peak performance Systems engineering is applied to vast numbers of problems in industry and the military An example of systems engineering at work is the control of the timing of thousands of city traffic lights to maximize traffic flow The complex and intricate field of electronics and computers is perfectly suited for systems engineering analysis and in turn advances in communications and computer technology have made more advanced systems engineering problems solvable Thus the two areas fed off of one another This book is a basic introduction to the use of models and methods in the engineering design of systems It is aimed at students as well as practicing engineers The concept of the systems of systems is discussed extensively after a critical comparison of the different definitions and a range of various practical illustrations It also provides key answers as to what a system of systems is and how its complexity can be mastered *Human Factors in Simulation and Training* Peter A. Hancock, Dennis A. Vincenzi, John A. Wise, Mustapha Mouloua, 2008-12-17 Discussing issues and concepts relating to human factors in simulation this book covers theory and application in fields such as space ships submarines naval aviation and commercial aviation The authors develop and expand on concepts in simulator usage particularly specific characteristics and issues of simulation and their effect on the validity and functionality of simulators as a training device The chapters contain in depth discussions of these particular characteristics and issues They also incorporate theories pertaining to the motivational aspects of training simulation of social events and PC based simulation **Managing the Complexity of Critical Infrastructures** Roberto Setola, Vittorio Rosato, Elias Kyriakides, Erich Rome, 2017-02-10 This book is open access under a CC BY 4 0 license This book summarizes work being pursued in the context of the CIPRNet Critical Infrastructure Preparedness and Resilience Research Network research project co funded by the European Union under the Seventh Framework Programme FP7 The project is intended to provide concrete and on going support to the Critical Infrastructure Protection CIP research communities enhancing their preparedness for CI related emergencies while also providing expertise and technologies for other stakeholders to promote their understanding and mitigation of the consequences of CI disruptions leading to enhanced resilience The book collects the tutorial material developed by the authors for several courses on the modelling simulation

and analysis of CIs representing extensive and integrated CIP expertise It will help CI stakeholders CI operators and civil protection authorities understand the complex system of CIs and help them adapt to these changes and threats in order to be as prepared as possible for mitigating emergencies and crises affecting or arising from CIs
