

Gearshift linkage

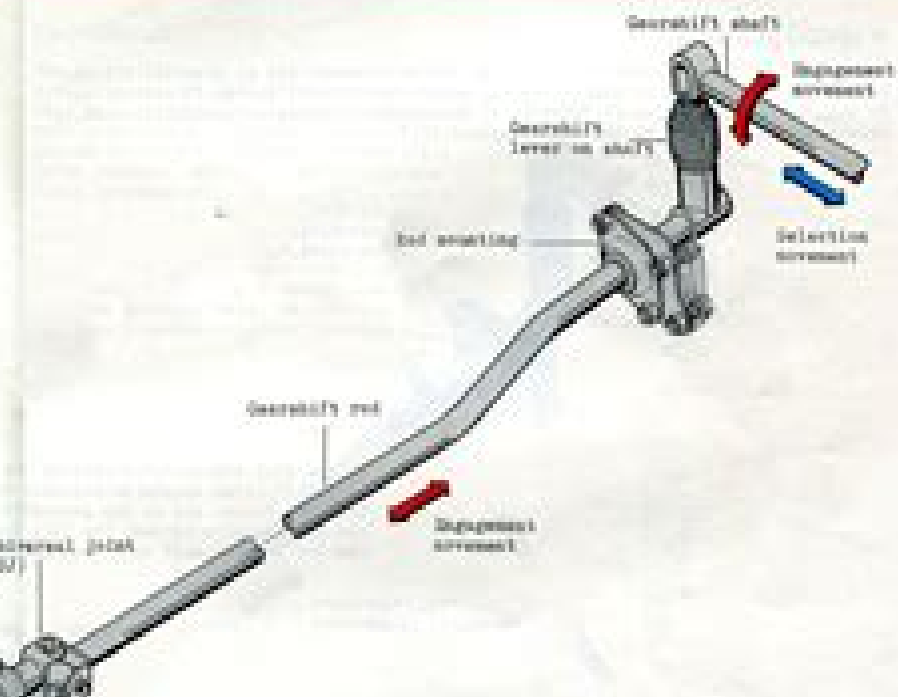

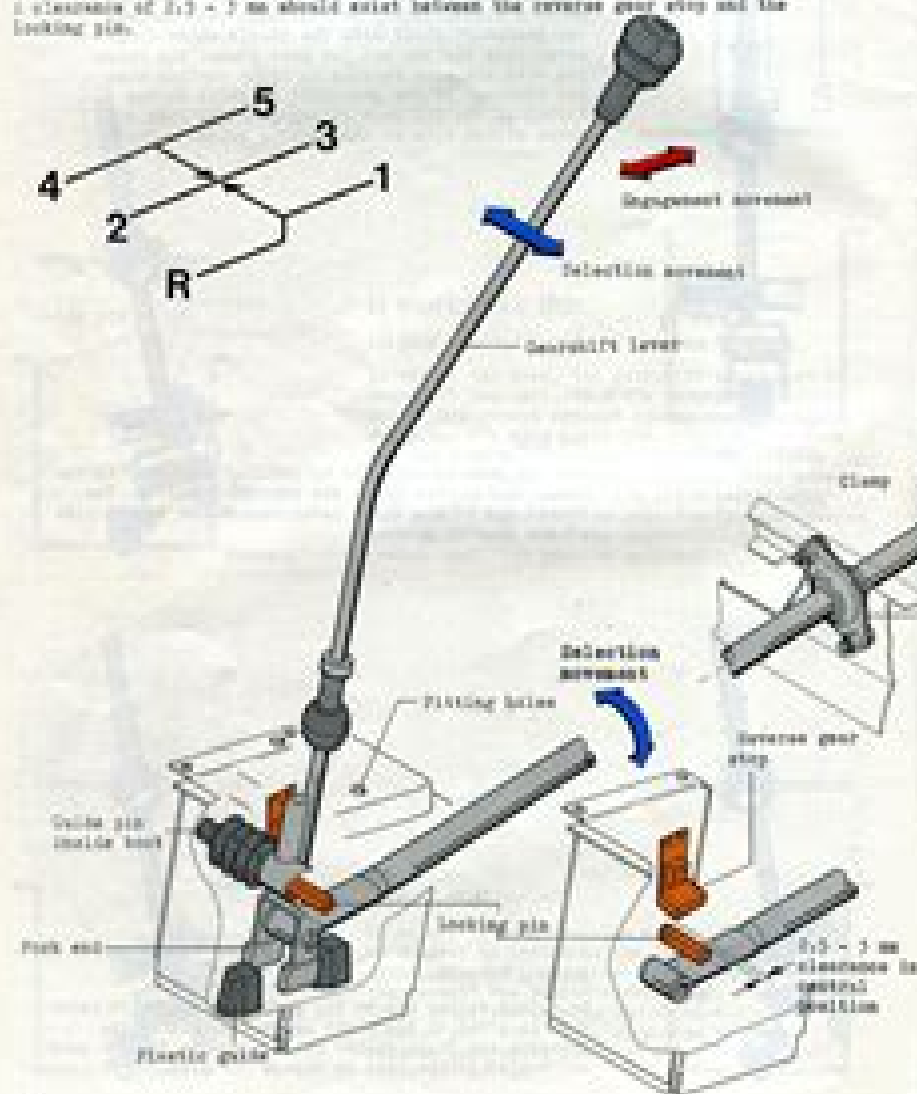

5 speed gearbox

The gearshift lever together with its mounting must be fitted so that the fitting holes in the vehicle floor and in the gearshift lever housing align with one another. The lever is then correctly located for all gear selection actions.

To ensure that the gearshift lever aligns properly to the gearshift shaft, attention must be paid to the following:

The lever should be positioned in the selection plane so that the guide pin with the ball end makes contact with the bearing wall.

A clearance of 0.3 - 0.5 mm should exist between the reverse gear stop and the locking pin.

In the neutral position, the shaft can be moved to and fro against spring pressure. The shaft always centralizes itself however in the hot and hot gear slots.

When making an "engagement movement" a slight clearance (approx. 2 mm) can be felt on the gearshift lever. This clearance must be adjusted.

This positioning of the gearshift shaft and the previously described positioning of the gearshift lever are prerequisites before tightening the gearshift and clasp.

a EF located approximately in the middle of the
width and compression for red off-set.

Half red mountings on the gearbox and approx. half way along the vehicle chassis provide the necessary support.
