operacional tanto de los operadores comerciales como de la aviación general o las organizaciones militares con medios a reos. A través de los avances técnicos y la investigación de accidentes y sucesos inseguros la industria ha logrado incrementar los niveles de seguridad con ese criterio está estructurada la obra. Desde los primeros contactos del hombre con los fallos de sus rudimentarias herramientas hasta los complejos materiales compuestos que hoy utiliza la industria aeroespacial, esta obra contempla el amplio espectro de materias primas, propiedades intrínsecas, comportamiento técnico y propensión a fallos a través de una visión y un análisis interdisciplinario y sistémico. El texto está estructurado de modo que el lector pueda utilizar este libro como lectura técnica o como manual de consulta sobre temas específicos. La cronología de los temas se ha desarrollado desde un marco histórico evolutivo partiendo desde las materias primas y las técnicas de fabricación, los conceptos de estructuras aeronáuticas, la mecánica de fractura, el análisis de fallos con y sin fractura, la mecánica de fatiga, los protocolos de análisis e investigación internacionales, los factores humanos y organizacionales en el reactivo hasta un compendio de casos técnicos que posibilita la fácil comprensión de conceptos abstractos. La obra se estructura en 13 capítulos desarrollados con un enfoque académico, tiene un marco histórico referencial y procesos de comprobación analítica. De igual modo, en todos los casos y capítulos se han utilizado datos ímgenes y gráficos obtenidos de investigaciones reales de fallos en servicio en la industria aeronáutica. Asimismo, el libro se nutre de gran cantidad de información obtenida durante el proceso de investigación técnica y detección de fallos en accidentes e incidentes de aviación. Como se indicaba anteriormente, la obra en su conjunto presenta una marcada visión sistémica cuyo objetivo es hallar las causas profundas de los fallos y las condiciones latentes presentes en el sistema que propician los accidentes e incidentes. El autor, investigador técnico de accidentes de aviación, lleva más de 15 años dedicado al estudio de la seguridad operacional desde el ámbito técnico por lo que ha participado en la investigación de accidentes de aviación de transporte, aviación general y aviación deportiva. Actualmente desempeña su labor profesional en la autoridad aeronáutica de la República Argentina como director nacional de investigaciones. También ha sido docente de temas técnicos específicos de investigación y es autor de otros trabajos y obras relacionados con este ámbito.

Our oldest archival records originate from the Near East. Systems of archival record keeping developed over several millennia in Mesopotamia before spreading to Egypt, the Mycenaean world and the Persian empire and continuing through the Hellenistic and Seleucid periods. Yet we know little about the way archival practices were established, transmitted, modified and adapted by other civilizations. This interdisciplinary volume offers a systematic approach to archival documents and to the societies

which created them addressing questions of formal aspects of creating writing and storing ancient documents and showing how archival systems were copied and adapted across a wide geographical area and an extensive period of time
