

Unit: Periodic Trends Initiation: Energy Trend – Which Way?

AP/IB/IBU/IBT

Directions: Please answer each #1 to the best of your best ability.

1. The energy required to remove an electron from a gas atom is called the **ionization** energy.
2. When an electron is removed that atom gets a **positive** charge.
3. The energy required to remove a second electron is called the **second ionization** energy.
4. It always requires **more** to remove a second electron.
5. The energy required to remove an electron is always more, more greater if the atom is transferred with a **higher** charge. The electron is removed.
6. The ionization energy of the elements will **decrease** as you move down a group on the Periodic Table.
7. This is because the more down you **go** attached to the nucleus are they get further away from the nucleus.
8. The ionization energy of the elements will **increase** as you move from left to right across a period on the periodic table.
9. This is because the more down you **go** same distance from the nucleus that same period, but the elements have **more** protons as you move from left to right across the periodic table.
10. Circle the element in each of the following pairs with the greater **1st** ionization energy:

a) Lithium or Boron	c) Potassium or Calcium
b) Strontium or Strontium	d) Sodium or Argon
11. Arrange the following elements in order of increasing ionization energy:

a) Sr, Rb, Mg Al, Mg, Sr	c) Na, Li, K, Rb, Cs, Fr
b) Sr, Cs, Ba Cs, Ba, Sr	
12. Why is there a very large increase between the 1^{st} and 2^{nd} ionization energies?

An Introductory Guide to Computational Methods for the Solution of Physics Problems George Rawitscher,Victo dos Santos Filho,Thiago Carvalho Peixoto,2018-10-24 This monograph presents fundamental aspects of modern spectral and other computational methods which are not generally taught in traditional courses It emphasizes concepts as errors convergence stability order and efficiency applied to the solution of physical problems The spectral methods consist in expanding the function to be calculated into a set of appropriate basis functions generally orthogonal polynomials and the respective expansion coefficients are obtained via collocation equations The main advantage of these methods is that they simultaneously take into account all available information rather only the information available at a limited number of mesh points They require more complicated matrix equations than those obtained in finite difference methods However the elegance speed and accuracy of the spectral methods more than compensates for any such drawbacks During the course of the monograph the authors examine the usually rapid convergence of the spectral expansions and the improved accuracy that results when nonequispaced support points are used in contrast to the equispaced points used in finite difference methods In particular they demonstrate the enhanced accuracy obtained in the solution of integral equations The monograph includes an informative introduction to old and new computational methods with numerous practical examples while at the same time pointing out the errors that each of the available algorithms introduces into the specific solution It is a valuable resource for undergraduate students as an introduction to the field and for graduate students wishing to compare the available computational methods In addition the work develops the criteria required for students to select the most suitable method to solve the particular scientific problem that they are confronting

JEE Advanced Physics - Unitwise Practice Test Papers Career Point Kota, 2020-07-20 Competitive examination preparation takes enormous efforts time on the part of a student to learn practice and master each unit of the syllabus To check proficiency level in each unit student must take self assessment to identify his her weak areas to work upon that eventually builds confidence to win Also performance of a student in exam improves significantly if student is familiar with the exact nature type and difficulty level of the questions being asked in the Exam With this objective in mind we are presenting before you this book containing unit tests Some features of the books are The complete syllabus is divided into logical units and there is a self assessment tests for each unit Tests are prepared by subject experts who have decade of experience to prepare students for competitive exams Tests are as per the latest pattern of the examination Detailed explanatory solution of each test paper is also given Student is advised to attempt these Tests once they complete the preparation revision of unit They should attempt these Test in exam like environment in a specified time Student is advised to properly analyze the solutions and think of alternative methods and linkage to the solutions of identical problems also We firmly believe that the book in this form will definitely help a genuine hardworking student We have put our best efforts to make this book error free still there may be some errors We would appreciate if the same is brought to our notice We wish to utilize the opportunity to place on record our special thanks to all faculty members and editorial team for their efforts to make this book **Optimality in Biological and Artificial Networks?** Daniel S. Levine, Wesley R. Elsberry, 2013-06-17

This book is the third in a series based on conferences sponsored by the Metroplex Institute for Neural Dynamics an interdisciplinary organization of neural network professionals in academia and industry The topics selected are of broad interest to both those interested in designing machines to perform intelligent functions and those interested in studying how these functions are actually performed by living organisms and generate discussion of basic and controversial issues in the study of mind The topic of optimality was chosen because it has provoked considerable discussion and controversy in many different academic fields There are several aspects to the issue of optimality First is it true that actual behavior and cognitive functions of living animals including humans can be considered as optimal in some sense Second what is the utility function for biological organisms if any and can it be described mathematically Rather than organize the chapters on a biological

versus artificial basis or by what stance they took on optimality it seemed more natural to organize them either by what level of questions they posed or by what intelligent functions they dealt with The book begins with some general frameworks for discussing optimality or the lack of it in biological or artificial systems The next set of chapters deals with some general mathematical and computational theories that help to clarify what the notion of optimality might entail in specific classes of networks The final section deals with optimality in the context of many different high level issues including exploring one's environment understanding mental illness linguistic communication and social organization The diversity of topics covered in this book is designed to stimulate interdisciplinary thinking and speculation about deep problems in intelligent system organization
