Managing With Power Jeffrey Pfeffer, 1993-11-12 Although much has been written about how to make better decisions a decision by itself changes nothing The big problem facing managers and their organizations today is one of implementation how to get things done in a timely and effective way Problems of implementation are really issues of how to influence behavior change the course of events overcome resistance and get people to do things they would not otherwise do In a word power *Managing With Power* provides an in depth look at the role of power and influence in organizations Pfeffer shows convincingly that its effective use is an essential component of strong leadership With vivid examples he makes a compelling case for the necessity of power in mobilizing the political support and resources to get things done in any organization He provides an intriguing look at the personal attributes such as flexibility stamina and a high tolerance for conflict and the structural factors such as control of resources access to information and formal authority that can help managers advance organizational goals and achieve individual success

From Resource Allocation to Strategy Joseph L. Bower, Clark G. Gilbert, 2005-10-27 Is strategy a coherent plan conceived at the top by a visionary leader or is it formed by a series of individual commitments not always reflecting what top management has in mind If it is a series of commitments how can they be managed To answer these questions Joseph L

Bower and Clark G Gilbert present research that examines how strategy is actually made by company managers across several levels of an organization. The research penetrates the black box of strategy formulation and shows that a company's realized strategy emerges less from the formal statements of corporate strategy but often out of the pattern of resource commitments that originate across every level of the firm. Drawing on over thirty years of research on resource allocation including studies from Harvard Business School, Stanford, London Business School and INSEAD, the book's five sections detail the structural characteristics of the resource allocation process, how the process can lead to breakdowns in strategic outcomes, and where top management can intervene to shape desired results. And while the organizing authors connect over three decades of research on resource allocation, they have also included assessments of this work by thought leaders in the fields of economics, competitive strategy, organizational behavior, and strategic management. The processes described represent the complex reality of strategy formulation in large organizations, but the ideas are presented in a way that enables the reader to access and understand the implications of these complexities. The findings should inform the research of economists, strategists, and behavioural scientists. Thoughtful executives and those who consult with them will also find the book provocative and instructive.
