

Unit 6, Lesson 3B

Activity 1

Understanding Aggregate Demand

Aggregate demand consists of four components: the demand for goods and services from consumers, from firms (called business investment), from government, and from net exports. It represents all the demand in the economy.

Consumers demand consumer goods and services, which include a large portion. Firms demand goods for production. The government demands goods for its operations. Net exports include the difference of the goods that the U.S. exports and imports.

The demand for services is “hidden” because the services are sold privately. For example, the government demands services, which include most of the health care in the United States.

Net exports are the difference between the demand for exports and imports. Exports are goods and services that the U.S. exports to other countries. Imports are goods and services that the U.S. imports from other countries.

Activity 2: Aggregate Demand

Write an aggregate demand curve. The aggregate demand curve shows the relationship between the price level and the quantity of aggregate demand. It is downward sloping. It is derived from the individual demand curves for the four components of aggregate demand. The aggregate demand curve is downward sloping because as the price level falls, the quantity of aggregate demand increases. This is because as the price level falls, the quantity of goods and services demanded by consumers, firms, and the government increases. Also, as the price level falls, the quantity of net exports increases. Therefore, the aggregate demand curve is downward sloping.
