Kawano, 2020-09-29 Dynamics can be a major frustration for those students who don't relate to the logic behind the material and this includes many of them Engineering Mechanics Dynamics meets their needs by combining rigor with user friendliness The presentation in this text is very personalized giving students the sense that they are having a one on one discussion with the authors This minimizes the air of mystery that a more austere presentation can engender and aids immensely in the students ability to retain and apply the material The authors do not skimp on rigor but at the same time work tirelessly to make the material accessible and as far as possible fun to learn **Hydraulics in Civil and Environmental Engineering** Andrew Chadwick, John Morfett, Martin Borthwick, 2021-06-07 This classic text now in its sixth edition combines a thorough coverage of the basic principles of civil engineering hydraulics with a wide ranging treatment of practical real world applications It now includes a powerful online resource with worked solutions for chapter problems and solution spreadsheets for more complex problems that may be used as templates for similar issues Hydraulics in Civil and Environmental Engineering is structured into two parts to deal with principles and more advanced topics The

first part focuses on fundamentals such as hydrostatics hydrodynamics pipe and open channel flow wave theory physical modelling hydrology and sediment transport The second part illustrates engineering applications of these principles to pipeline system design hydraulic structures river and coastal engineering including up to date environmental implications as well as a chapter on computational modelling illustrating the application of computational simulation techniques to modern design in a variety of contexts New material and additional problems for solution have been added to the chapters on hydrostatics pipe flow and dimensional analysis The hydrology chapter has been revised to reflect updated UK flood estimation methods data and software The recommendations regarding the assessment of uncertainty climate change predictions impacts and adaptation measures have been updated as has the guidance on the application of computational simulation techniques to river flood modelling Andrew Chadwick is an honorary professor of coastal engineering and the former associate director of the Marine Institute at the University of Plymouth UK John Morfett was the head of hydraulics research and taught at the University of Brighton UK Martin Borthwick is a consultant hydrologist formerly a flood hydrology advisor at the UK's Environment Agency and previously an associate professor at the University of Plymouth UK
