Synthetic Aperture Radar J. Patrick Fitch, 2012-12-06 Radar like most well developed areas has its own vocabulary Words like Doppler frequency pulse compression mismatched filter carrier frequency in phase and quadrature have specific meaning to the radar engineer In fact the word radar is actually an acronym for RAdio Detection And RAnging Even though these words are well defined they can act as road blocks which keep people without a radar background from utilizing the large amount of data literature and expertise within the radar community This is unfortunate because the use of digital radar processing techniques has made possible the analysis of radar signals on many general purpose digital computers Of special interest are the surface mapping radars such as the Seasat and the shuttle imaging radars which utilize a technique known as synthetic aperture radar SAR to create high resolution images pictures This data appeals to cartographers agronomists oceanographers and others who want to perform image enhancement parameter estimation pattern recognition and other information extraction techniques on the radar imagery The first chapter presents the basics of radar processing techniques

for calculating range distance by measuring round trip propagation times for radar pulses This is the same technique that sightseers use when calculating the width of a canyon by timing the round trip delay using echoes In fact the corresponding approach in radar is usually called the pulse echo technique

Synthetic Aperture Radar John C. Curlander, Robert N. McDonough, 1992-04-16 The use of synthetic aperture radar SAR represents a new era in remote sensing technology A complete handbook for anyone who must design an SAR system capable of reliably producing high quality image data products free from image artifacts and calibrated in terms of the target backscatter coefficient Combines fundamentals underlying the SAR imaging process and the practical system engineering required to produce quality images from a real SAR system Beginning with a broad overview of SAR technology it goes on to examine SAR system capabilities and components and detail the techniques required for design and development of the SAR ground data system with emphasis on the correlation processing Intended for SAR system engineers and researchers it is generously illustrated for maximum clarity

Spotlight-Mode Synthetic Aperture Radar: A Signal Processing Approach Charles V. J. Jakowatz, Daniel E. Wahl, Paul H. Eichel, Dennis C. Ghiglia, Paul A. Thompson, 2012-12-06 Modern airborne and spaceborne imaging radars known as synthetic aperture radars SARs are capable of producing high quality pictures of the earth's surface while avoiding some of the shortcomings of certain other forms of remote imaging systems Primarily radar overcomes the nighttime limitations of optical cameras and the cloud cover limitations of both optical and infrared imagers In addition because imaging radars use a form of coherent illumination they can be used in certain special modes such as interferometry to produce some unique derivative image products that incoherent systems cannot One such product is a highly accurate digital terrain elevation map DTEM The most recent ca 1980 version of imaging radar known as spotlight mode SAR can produce imagery with spatial resolution that begins to approach that of remote optical imagers For all of these reasons synthetic aperture radar imaging is rapidly becoming a key technology in the world of modern remote sensing Much of the basic workings of synthetic aperture radars is rooted in the concepts of signal processing Starting with that premise this book explores in depth the fundamental principles upon which the spotlight mode of SAR imaging is constructed using almost exclusively the language concepts and major building blocks of signal processing Spotlight Mode Synthetic Aperture Radar A Signal Processing Approach is intended for a variety of audiences Engineers and scientists working in the field of remote sensing but who do not have experience with SAR imaging will find an easy entrance into what can seem at times a very complicated subject Experienced radar engineers will find that the book describes several modern areas of SAR processing that they might not have explored previously e g interferometric SAR for change detection and terrain elevation mapping or modern non parametric approaches to SAR autofocus Senior undergraduates primarily in electrical engineering who have had courses in digital signal and image processing but who have had no exposure to SAR could find the book useful in a one semester course as a reference
