Weiss, 2008-03-04 Major advances in the quantum theory of macroscopic systems in combination with stunning experimental achievements have brightened the field and brought it to the attention of the general community in natural sciences Today working knowledge of dissipative quantum mechanics is an essential tool for many physicists This book originally published in 1990 and republished in 1999 as an enlarged second edition delves much deeper than ever before into the fundamental concepts methods and applications of quantum dissipative systems including the most recent developments In this third edition 26 chapters from the second edition contain additional material and several chapters are completely rewritten It deals with the phenomena and theory of decoherence relaxation and dissipation in quantum mechanics that arise from the

interaction with the environment In so doing a general path integral description of equilibrium thermodynamics and nonequilibrium dynamics is developed

Visualizing Dynamic Systems Mojgan M Haghanikar,2022-06-01 This book is aimed to help instructional designers science game designers science faculty lab designers and content developers in designing interactive learning experiences using emerging technologies and cyberlearning The proposed solutions are for undergraduate and graduate scientific communication engineering courses scientific research communication and workforce training Reviewing across the science education literature reveals various aspects of unresolved challenges or inabilities in the visualization of scientific concepts Visuospatial thinking is the fundamental part of learning sciences however promoting spatial thinking has not been emphasized enough in the educational system Hegarty 2014 Cognitive scientists distinguish between the multiple aspects of spatial ability and stress that various problems or disciplines require different types of spatial skills For example the spatial ability to visualize anatomy cross sections is significantly associated with mental rotation skills The same is true for physical problems that often deal with spatial representations However most of the physics problems are marked by dynamicity and visualizing dynamicity is inferred by the integrations of different participating components in the system Therefore what is needed for learning dynamicity is visualizing the mental animation of static episodes This book is a leap into designing framework for using mixed reality XR technologies and cyberlearning in communicating advanced scientific concepts The intention is to flesh out the cognitive infrastructure and visuospatial demands of complex systems and compare them in various contexts and disciplines The practical implementation of emerging technology can be achieved by foreseeing each XR technology's affordances and mapping those out to the cognitive infrastructure and visuospatial demands of the content under development
