Transportation Design Operation and Regulation Too often transportation systems fail the very people they are meant to
serve Although engineers and policymakers design systems based on industry standards real world users drivers cyclists and
pedestrians face hazards that are often overlooked From poorly maintained winter roads to a misalignment in expected
versus actual usage due to human factors these oversights put lives at risk Forensic transportation engineer Robert Gilchrist
evaluates conventional thinking in transportation engineering through a human lens By discussing the disconnect between
industry standards and real world conditions he encourages a user centric approach one that considers human factors
environmental challenges and the true cost of system failures Through case studies regulation analysis and expert insights he
challenges current practice and supports an adjustment of baseline thinking to improve safety and decision making With
decades of experience investigating transportation failures Gilchrist provides a compelling accessible guide for engineers
policymakers lawyers and system users alike to inspire safer smarter transportation systems
