links between computer interpretable data. Such a Semantic Web would make it possible to query and reason over integrated data sets consisting of separate pieces of information that were never intended to be linked together but that can nevertheless be fruitfully combined and integrated sometimes even by a third party who neither wrote nor owns any of the original pieces of data just as is possible with web pages on the current Web.

**Introduction to Computational Social Science** Claudio Cioffi-Revilla, 2017-06-29 This textbook provides a comprehensive and reader friendly introduction to the field of computational social science (CSS). Presenting a unified treatment, the text examines in detail the four key methodological approaches of automated social information extraction, social network analysis, social complexity theory, and social simulation modeling. This updated new edition has been enhanced with numerous review questions and exercises to test what has been learned, deepen understanding through problem solving, and to practice writing code to implement ideas. Topics and features: contains more than a thousand questions and exercises together with a list of acronyms and a glossary; examines the similarities and differences between computers and social systems; presents a focus on automated information extraction; discusses the measurement, scientific laws, and generative theories of social complexity in CSS; reviews the methodology of social simulations covering both variable and object oriented models.

**Knowledge Management 2.0: Organizational Models and Enterprise Strategies** Boughzala, Imed, Duede, Aurelie, 2011-09-30 In the last few years, knowledge management practices have evolved in organizations. The introduction of Web 2.0 technologies has encouraged new methods of information usage and knowledge sharing which are frequently used by employees who already rely on these Web 2.0 technologies in their personal lives.
