Virtual Civilization In The 21st Century:

Virtual Civilization in the 21st Century Andrew Targowski, 2015 This book analyzes a new phenomenon in civilization the transformation of the current Information Wave into virtual civilization In the 21st century the real space of the world civilization due to the massive network intensive use of computers world wide gained the virtual space known as cyberspace Cyberspace is a product of information technology exemplified by the Internet as the world system of information highway s INFOSTRADA S which forms a digital space containing all sorts of files and communication exchanges practiced in online and real time modes For the first time in 6 000 years of human civilization society has become a quantum society which can be real and virtual at the same time The virtual society is invisible for those who do not use computer networks Even for those who do use them cyberspace access requires some sort of commercial transactions oriented activities ex on Amazon or eBay and others searching on Google or Yahoo or communicating as a member of one of social networks e g Facebook Twitter LinkedIn and others

Informing and Civilization Prof. Dr. Andrew Targowski, 2016 The aim of this book is to synthesize the role of information throughout the history of civilization s development This will be defined through the convergence of a the cumulative evolution and revolution of the intellect cognition as data information concepts knowledge and wisdom b labor and c politics which seek to control the environment society and the world applying culture and infrastructure as tools Whereas researchers reveal the myriad of dimensions of the social order and its historiography this book provides a synthesis of the relations which is limited to information and its informing systems and civilization within the context of historiosophie history with judgment The method presented in this book the architectural approach to the dynamics of civilizational development is a new layer over the quantitative history based on statistical data In an architectural synthesis of civilization

we seek a big picture of civilization waves in order to develop some criteria oriented views of the world and its future predictability To understand the crises and conflicts of civilization which are driven by technology in recent centuries such a synthesis as well as optimism for human proactive adaptation survival and development must be undertaken This approach to civilizational development should allow humans to eventually reinvent the future in a continuous manner We in due course should be able to predict the rate of change and provide civilization bridging solutions based on original thinking It is important to remind ourselves that information is as old as our world about 15 billion years because plants and trees and in general non human nature produces all sorts of information for example the changing colors of plants and trees which is associated with the different seasons When the first living organisms appeared on our planet they had ability to inform as well by changing forms colors signals and so on The first signs of life on our planet came into being about 3 85 billion years ago Therefore organism based life on the Earth actually came to be over a period of just 130 million years Hominids diverged from apes some 10 6 million years ago instinct driven info communication i e behavior less controlled by cognition and the first humans bipeds with large brains who could use tools and sound driven info communication took form around 6 2 5 million years ago in Southeast Africa Homo symbolicus who could skillfully use language appeared about 60 000 years ago The origin of civilization some 6 000 years ago marks the beginning of the first advanced info communication systems applied by humans who could even record information

The History, Present State, and Future of Information Technology Andrew Targowski, 2016 In Part I Prof Targowski takes us through the evolution of modern computing and information systems While much of this material is familiar to those of us who have lived through these developments it would definitely not be familiar to our children or our students He also introduces a perspective that I found both refreshing and useful looking at the evolution on a country by country basis For those of us who live in the U S it is all too easy to imagine that evolution to be a purely local phenomenon I found my appreciation of the truly global nature of computing expanding as he walked me through each country s contributions In Parts II and III constituting nearly half of the book Targowski provides what I would describe as an in depth case study of the challenges and successes of informatics in Poland As he tells each story many of which involved him personally the reader cannot help but better understand the close relationship between the freedoms that we in the west take for granted and the ability to produce innovations in IT Even after Poland left the orbit of the former Soviet Union the remaining vestiges of the old way of thinking remained a major impediment to progress Being right and being rigorous were far less important than being in tune with the approved ways of thinking There are important lessons to be learned here particularly as we try to project how IT will evolve in rapidly developing economies such as China But from my experience they apply equally well to western academia where moving outside of preferred values and patterns of research can lead a scholar to be ignored or even disparaged In Part IV Targowski presents a bold forward looking synthesis of informatics and informing science in the future Building upon articles recently published in *Informing Science* The

International Journal of an Emerging Transdiscipline he presents a conceptual scheme of historical informing waves that builds upon historians such as Toynbee He then considers how these trends will necessarily force us to rethink how we develop and apply IT He does not steer away from the controversial But he also provides cogent arguments for all his predictions and recommendations

Wisdom in the Context of Globalization and Civilization Henryk

Krawczyk,2019-11-26 What happens when our developed knowledge does not support human activities in politics economy culture and infrastructure today The solution lies in knowing what wisdom is and willingly applying it to most of humanity s activities transforming a chaotic civilization into a wise one A merely knowledge rich society cannot sustain its civilization without being wise and willing to learn and apply this essential human virtue in practice This book investigates the issues of human cognition with regards to current issues surrounding globalization and civilization in such a way as to define wisdom not only as an art but as a science too Its investigation emphasises the learning of wisdom at schools and colleges and stresses that its application in practice should be as commonplace as arithmetic
