Evolution

Q: What is natural selection?

16.1 What patterns of biodiversity did Darwin observe aboard the *Beagle*?

WHAT I KNOW

SAMPLE ANSWER: On each island that Darwin visited, he saw different species of plants and animals.

WHAT I LEARNED

SAMPLE ANSWER: Darwin noticed that different, yet similar, species inhabited separated, but similar, habitats around the globe. Also, different, yet related, species often occupied different habitats within a local area.

16.2 How did other scientists' work help Darwin develop his theory of natural selection?

SAMPLE ANSWER: Other scientists did research on how organisms inherited different traits.

SAMPLE ANSWER: Hutton and Lyell concluded that Earth is extremely old. Lamarck suggested that species are not fixed. Malthus reasoned larger populations would deplete resources.

16.3 What is Darwin's theory of evolution by natural selection?

SAMPLE ANSWER: Organisms that are best adapted to their environment survive longer and have more offspring.

SAMPLE ANSWER: Natural selection is the process by which organisms with variations most suited to their local environment survive and leave more offspring. Over time, beneficial traits accumulate in a population.

16.4 What are the main lines of scientific evidence that support Darwin's theory of evolution by natural selection?

SAMPLE ANSWER: Fossils show how organisms have changed over time.

SAMPLE ANSWER: Biogeography, fossils, homologous structures, similarities in embryological development, the universal genetic code, homologous molecules, and field studies provide evidence of evolution.

From Aristotle to Darwin and Back Again Etienne Gilson,2009-09-28 Foreword by Christoph Cardinal Sch nborn Darwin s theory of evolution remains controversial even though most scientists philosophers and even theologians accept it in some form as an explanation for the variety of organisms The controversy erupts when the theory is used to try to explain

everything including every aspect of human life and to deny the role of a Creator or a purpose to life The overreaching of many scientists into matters beyond the self imposed limits of scientific method is perhaps explained in part by the loss of two important ideas in modern thinking final causality or purpose and formal causality Scientists understandably bracket the idea out of their scientific thinking because they seek explanations on the level of material and efficient causes only Yet many of them wrongly conclude from their selective study of the world that final and formal causes do not exist at all and that they have no place in the rational study of life Likewise many erroneously assume that philosophy cannot draw upon scientific findings in light of final and formal causality to better understand the world and man The great philosopher and historian of philosophy tienne Gilson sets out to show that final causality or purposiveness and formal causality are principles for those who think hard and carefully about the world including the world of biology Gilson insists that a completely rational understanding of organisms and biological systems requires the philosophical notion of teleology the idea that certain kinds of things exist and have ends or purposes the fulfillment of which are linked to their natures in other words formal and final causes His approach relies on philosophical reflection on the facts of science not upon theology or an appeal to religious authorities such as the Church or the Bible The object of the present essay is not to make of final causality a scientific notion which it is not but to show that it is a philosophical inevitability and consequently a constant of biophilosophy or philosophy of life It is not then a question of theology If there is teleology in nature the theologian has the right to rely on this fact in order to draw from it the consequences which in his eyes proceed from it concerning the existence of God But the existence of teleology in the universe is the object of a properly philosophical reflection which has no other goal than to confirm or invalidate the reality of it The present work will be concerned with nothing else reason interpreting sensible experience does it or does it not conclude to the existence of teleology in nature tienne Gilson Biology Textbooks 1990 ,1990
