Oliveira, 2018-09-19 Alzheimer's Disease AD is the product of the slow and progressive degenerative alteration that develops in the adult brain and can remain asymptomatic for a considerable time before cognitive deficits becomes evident The main challenge for researchers is to identify markers of this degenerative process and in this sense data has been generated through experiments bringing to light new mechanisms and hypothesis to explain its pathophysiology This book is a review of recent studies in AD molecular biology Chapters explain various facets of AD which include animal models morphological changes membrane composition amyloidogenic peptides intracellular transport systems and the role of oxidative stress and calcium deregulation Readers will understand the molecular mechanisms behind AD and therefore broaden their perspective on this neurodegenerative disease and its progression

Handbook of nutrition and diet in leukemia and blood disease therapy Ronald Ross Watson, Daruka Mahadevan, 2023-08-07 This handbook provides an overview of the latest science of the influence of nutrition on blood cells and blood diseases Blood diseases include a broad range of nutritional deficiencies leukemias and genetic mutations associated with an increased risk of infections

Reduced red blood cell production can lead to nutritional diseases and anemias requiring iron supplementation. Patients with anemia feel sick, fatigued, and have nausea affecting food intake, worsening their condition. Changes in serum and blood cells affect coagulation as well as the immune cells' production of cytokines and immunoglobulin. The blood cells' interactions affect all major organ systems. Nutrition and food play a key role in the health of blood cells and their functions. Vitamins and minerals such as vitamin E, C, and iron affect the production of blood cells and their proteins, including hemoglobin. In addition, other nutrients like glutamine, L-carnitine, and the amino acid taurine play a crucial role in the production of blood cells and blood-related diseases. This book discusses nutritional therapies concerning stem cell transplantation, iron deficiency, cardiovascular diseases, sickle cell anemia, and sepsis patients among others. Nutritional therapy and management in leukemia is given a major focus. The key goal of this handbook is to review some of the nutritional approaches for efficacy in treatment of blood diseases, reduction of their clinical complications, and the improvement of the quality of life of these patients.
