Worked Examples for the Design of Concrete Structures to Eurocode 2 Tony Threlfall, 2013-06-06 This practical design guide illustrates through worked examples how Eurocode 2 may be used in practice Complete and detailed designs of six archetypal building and public utility structures are provided The book caters to students and engineers with little or no practical experience of design as well as to more experienced engineers who may be unfamiliar with Eurocode 2 Chapter 1 provides an introduction to the Structural Eurocodes with particular reference to actions on structures Chapter 2 describes the principles requirements and methods used for the design of members This is followed by worked examples for the following structures A multi storey office building with three forms of floor construction A basement to the office building with three types of foundations A free standing cantilever earth retaining wall A large underground service reservoir An open top rectangular tank on an elastic soil An open top cylindrical tank on an elastic soil In addition to the design of all the elements the analysis of each structure is fully explained This applies particularly to the design of the basement and the tanks bearing on elastic soils for which specially derived tables are included in appendices to the book The calculations are complemented by reinforcement drawings in accordance with the recommendations in the third edition 2006 of the Standard method of detailing structural concrete with commentaries on the bar arrangements This book can be used as a stand alone publication or as a more detailed companion to Reynolds s Reinforced Concrete Designer s Handbook now in its 11th edition The comprehensive treatment of the designs and the variety of structures considered make this a unique and invaluable work

Reinforced Concrete with Worked Examples Franco Angotti, Matteo Guiglia, Piero Marro, Maurizio Orlando, 2022-06-07 This textbook describes the design of reinforced and prestressed concrete structures according to the latest advances both in the field of materials concrete and steel and in the field of structural analysis These advances have been included in current version of Eurocode 2 which is taken as reference All subjects are presented starting from their theoretical bases and passing to corresponding EC2 formulations A large part of the book is concerned with the most innovative EC2 parts like nonlinear structural analyses second order effects punching and strut and tie models The textbook is equipped with numerous worked examples useful for the reader who is not familiar with the design of reinforced and prestressed concrete structures by the Limit State Method Examples have been chosen among the most frequent cases of the professional practice Thanks to this structure it can be of interest both to structural designers for their professional training and to students of engineering and architecture schools for their studies The volume contains twelve chapters which follow the same structure of EC2 except for

chapter 6 dealing with prestressed concrete structures which does not match any chapter of EC2 as prestressed concrete is considered in EC2 as a particular case of reinforced concrete and corresponding formulations are shed over different chapters

concrete is a required prerequisite Practising structural engineers may utilize it for gaining background information on the CEB FIP Model Code 90 and national or regional codes as for ex EUROCODE 2 based on MC 90 The Textbook is also conceived to assist teachers at technical universities or engineering schools to achieve better understanding of the recent theories on structural concrete Having these targets in mind the General Assembly of CEB decided already in 1995 to set up a Special Activity Group Dissemination of Knowledge to realise that work The authors invited to draft the different chapters had been mostly involved already in drafting the Model Code 90 In this way consistent information could be provided both for the code and the textbook Each chapter has been thoroughly discussed and commented within the Special Activity Group 2 This textbook was first presented to fib members during the Technical Activity Workshop in October 1999 in Prague held in connection with the first fib symposium The authors are looking forward to receiving comments from various corners
