Pedigree Analysis

1. Determining the pattern of inheritance and assigning genotypes.

When working through a pedigree, the first thing you need to do is figure out which characteristic is dominant-the shaded one or the open one. Then you need to choose a letter (let's use A) and begin assigning genotypes. Remember that recessive individuals are **always** homozygous, so assign their genotypes first. Then go back and look at all of the dominant individuals. For some, you will only be able to determine one allele of the genotype, so just write the one capital allele followed by a dash (A-).

Fur Color in Mice

a. Which characteristic is dominant? Which is recessive?

b. What is your evidence?
