Souleyrette,2004 The Center for Transportation Research and Education CTRE issued a report in July 2003 based on a sample study of the application of remote sensed image land use change detection to the methodology of traffic monitoring in Blackhawk County Iowa In summary the results indicated a strong correlation and a statistically significant regression coefficient between the identification of built up land use change areas from remote sensed data and corresponding changes in traffic patterns

expressed as vehicle miles traveled VMT Based on these results the Iowa Department of Transportation Iowa DOT requested that CTRE expand the study area to five counties in the southwest quadrant of the state These counties are scheduled for traffic counts in 2004 and the Iowa DOT desired the data to 1 evaluate the current methodology used to place the devices 2 potentially influence the placement of traffic counting devices in areas of high built up land use change and 3 determine if opportunities exist to reduce the frequency and or density of monitoring activity in lower trafficked rural areas of the state This project is focused on the practical application of built up land use change data for placement of traffic count data recording devices in five southwest Iowa counties
