Control-Theoretic Models of Feedforward in Manual Control Frank M. Drop, 2016-11-03 Understanding how humans control a vehicle cars aircraft bicycles etc enables engineers to design faster safer more comfortable more energy efficient more versatile and thus better vehicles In a typical control task the Human Controller HC gives control inputs to a vehicle such that it follows a particular reference path e g the road accurately The HC is simultaneously required to attenuate the effect of disturbances e g turbulence perturbing the intended path of the vehicle To do so the HC can use a control organization that resembles a closed loop feedback controller a feedforward controller or a combination of both Previous research has shown that a purely closed loop feedback control organization is observed only in specific control tasks that do not resemble realistic control tasks in which the information presented to the human is very limited In realistic tasks a feedforward control strategy is to be expected yet almost all previously available HC models describe the human as a pure feedback controller lacking the important feedforward response Therefore the goal of the research described in this thesis was to obtain a fundamental understanding of feedforward in human manual control First a novel system identification method was developed which was necessary to identify human control dynamics in control tasks involving realistic reference signals Second the novel identification method was used to investigate three important aspects of feedforward through human in the loop experiments which resulted in a control theoretical model of feedforward in manual control The central element of the feedforward model is the inverse of the vehicle dynamics equal to the theoretically ideal feedforward dynamics However it was also found that the HC is not able to apply a feedforward response with these ideal dynamics and that limitations in the perception cognition and action loop need to be modeled by additional model elements a gain a time delay and a low pass filter Overall the thesis demonstrated that feedforward is indeed an essential part of human manual control behavior and should be accounted for in many human machine applications

Dynamic Systems Craig A. Kluever, 2015-04-06 Craig Kluever's *Dynamic Systems Modeling Simulation and Control* highlights essential topics such as analysis design and control of physical engineering systems often composed of interacting mechanical electrical and fluid subsystem components The major topics covered in this text include mathematical modeling system response analysis and an introduction to feedback control systems *Dynamic Systems* integrates an early introduction to numerical simulation using MATLAB's Simulink for integrated systems Simulink and MATLAB tutorials for both software programs will also be provided The author's text also has a strong emphasis on real world case studies

Manual for Menshin Design of Highway Bridges, 1994 Human Reliability K.S. Park, 2014-06-28 The objectives of Human Reliability are to build reliability into the job into the machine and into the environment and to let man perform naturally In this book the author shows how these objectives can be achieved by concentrating on human reliability issues during the design stage This is done by illustrating the relationships between various design features and some aspect of

human performance e g human errors The book is designed as a practical guide to the daily performance of tasks in Human Reliability as well as a general reference and tutorial introduction to the field It is therefore both practical and theoretical the first four chapters focus on principles and ramifications relevant to human error prevention the latter four are primarily concerned with human reliability analysis and prediction methodology Throughout the book there are extensive references numerous ready to use recommendations formulas and mathematical models and computer programs for human reliability work for analyzing predicting and preventing human errors in a variety of situations Though some of the material requires undergraduate training in engineering the more difficult mathematical expositions can be omitted without loss of continuity but are available for the reader who needs a more complete understanding of the relevant theory *Scientific and Technical Aerospace Reports* ,1995 **Bibliography on Power System Dynamics & Control, 1965-1972** Osama M.
