In addition, the book guides through interactive learning units which have been created and recorded for each module of SAP's APS. Learning units can be downloaded free of charge, ready to be displayed in a web browser. Together, the textbook and the learning units provide the required skills to better understand the concepts, models, and algorithms underlying today's APS.

Configuring SAP ERP Financials and Controlling Peter Jones, John Burger, 2011-02-11

SAP is the world leader in Enterprise Resource Planning (ERP) software. Of the software's modules, the FI (Finance) and CO (Controlling) are by far the most popular and are widely implemented. This book has no competition; it is the only book on the market on how to configure and implement SAP's FI and CO modules to maximize functionality and features. Hands-on, step-by-step instructions and real-world examples that provide immediate and practical solutions. Updated for SAP's ECC 6.0, the book covers FI enterprise structure, general ledger substitutions and validations, automatic account assignments, accounts payable and receivable, asset accounting, accrual engine, closing entries, credit management, lockbox, CO enterprise structure, profitability analysis, CO PA, and more.

Tailoring Software Infrastructures Christian Dörner, 2010

Today's non-tayloristic work environments call for flexible work practices supported by dynamic IT systems. Changing and optimising business processes has become an important adaptation mechanism in this context. However, process models cannot capture every conceivable real-life situation, and firms' software infrastructures often do not provide the flexibility required for supporting design in use through effective tailoring processes. The involvement of business users in the continuous redesign of business processes is a beneficial solution for these problems, as it enhances decision processes by making specific information available more quickly. However, involving business users in these redesign processes requires specific design tools. This book presents the development of an environment that enables business users to independently model business processes and workflows. The environment reduces the technical skills required for modelling business processes and workflows to enable business users to tailor heterogeneous software infrastructures. It also provides improved documentation facilities. The facilities add usage-related information about Web services to the existing functional metadata, which is already included in current Web service standards and workflow modelling tools. The environment enables business users to create this usage-related information cooperatively, which leads to a domain-specific documentation of Web services. Based on this information, it provides an enhanced search system that identifies related services and service functions. The evaluation of the environment showed that users had a positive perception of modelling business processes and workflows. They considered this to be useful for the visualisation and automation of business processes as well as for the creation of calculations, since it could enhance the efficiency and efficacy of their work.

Production Phase-Out Regina Wagner, 2017-08-03

Product development and ramp up is a well-researched challenge for industry. However, how to end the production of a product is a blind spot for industry and science, although practitioners are calling for scientific support. This book sheds light on the topic.

of production phase out by offering measures that can turn a process that is perceived as uninspiring to a success pillar for companies The book reveals cross industry insights on the relatively new topic of phase out The interview findings are mirrored with the Phase Out Process Model which describes activities and tasks to be performed during a phase out As an instrument to support the implementation of the process model the Phase Out Production Planning and Control was developed as an add on to standard production IT support It enables companies to better forecast spare parts needs and expected remaining stock costs at the proposed end of production Through a qualitative and a conceptual research phase the findings of this dissertation show that there is a high potential of improving phase out in the industry This manuscript provides theoretical and managerial implications to pave the way towards enhancing phase outs This potential can be raised by implementing the proposed formalization structures and mathematical models based on empirical and conceptual research This book therefore helps to promote the effective implementation of a formalized phase out in company s management practice to make their business more efficient

Real Optimization with SAP® APO Josef Kallrath, Thomas I. Maindl, 2006-09-02 Optimization is a serious issue touching many aspects of our life and activity But it has not yet been completely absorbed in our culture In this book the authors point out how relatively young even the word model is On top of that the concept is rather elusive How to deal with a technology that finds applications in things as diverse as logistics robotics circuit layout financial deals and traffic control Although during the last decades we made significant progress the broad public remained largely unaware of that The days of John von Neumann with his vast halls full of people frantically working mechanical calculators are long gone Things that looked completely impossible in my youth like solving mixed integer problems are routine by now All that was not just achieved by ever faster and cheaper computers but also by serious progress in mathematics But even in a world that more and more understands that it cannot afford to waste resources optimization remains to a large extent unknown R It is quite logical and also fortunate that SAP the leading supplier of enterprise management systems has embedded an optimizer in his software The authors have very carefully investigated the capabilities and the limits of APO Remember that optimization is still a work in progress We do not have the tool that does everything for everybody
