BOOK JACKET *Excavating Los Angeles* Midori Mizuhara, Massachusetts Institute of Technology. Department of Urban Studies and Planning, 2013 After decades of planning recent voter approved tax initiatives have enabled Los Angeles to expand its mass transit infrastructure Fast tracked construction projects of subway and light rail lines will connect areas of the city for the first time since the early 20th century streetcar era Increasing levels of population growth currently challenge LAs low density horizontal suburban form to fold inward and build upon itself in new ways and the city has embraced transit oriented development TOD as a strategy for accommodating this new growth at higher densities This moment provides a unique opportunity for architects urban designers and planners to rethink large scale urban design projects in LA and generate urban forms that reflect the identity of the city as opposed to importing outside models This thesis explores urban design futures through the lens of the

TOD and aims to create an LA specific model In a city that is defined by multiple layers of massive infrastructural systems designers need to think about how projects fit into larger scale systems in order to mediate these systems and find design opportunities within them What are the LA specific urban design goals that should guide new transit oriented development How can this scale of urban design project leverage large scale infrastructure systems and landscape elements to enhance the public realm mediate the environment and create an intermediate symbolic orienting structure for the city This thesis research explores these questions through three forms of inquiry theory mapping and design Theory research aims to understand what is meant by LA urbanism and creates a framework by which to understand future project within Mapping research generates a design agenda and attitude about the project Design research tests this agenda through a new LA specific TOD strategy through both site specific and prototypical design processes **Advanced City** Ali

Cheshmehzangi,2025-09-01 Evolution is by choice This is not a passive truth but a conscious commitment one that lies at the heart of what I call the Advanced City Coined and thoroughly introduced here in the book this new concept is based on people centric and data informed processes to enhance our cities and communities for their future and not for imagining future cities This is not another model in the long line of urban prescriptions nor a distant techno utopia to be fantasized It is a paradigm shift an invitation to think feel and build differently The Advanced City is a lived revolution a dynamic process grounded in values purpose and practice Too often we romanticize the future city glass towers flying cars machines and robots everywhere data driven dreams But these visions distract us from the urgency of the present They bypass the real work of transformation by projecting change onto an abstract tomorrow The Advanced City asks something deeper What kind of cities are we actively creating today here and now It is not about waiting for innovation to arrive It is about choosing a different path rooted in responsibility equity and long view thinking This book is not about cities as machines markets or spectacles It is about cities as ecosystems of meaning struggle creativity and care The Advanced City is a movement of re engagement for academics for planners for civic leaders and for all who call the city home It calls on us to be co creators of our urban futures not passive consumers of predesigned and predetermined solutions We need radical honesty about the failures of current systems and the intellectual courage to reimagine what s possible The advanced city resists the illusion of smartness and returns us to human truths interdependence justice and purpose It is about making change not waiting for it So this is not a new product for urban branding it is rather a process for transformation a paradigm shift and an urban revolution A call to co create cities that are not merely advanced in function but advanced in wisdom Here I also call for the development of Brother Cities and Advanced Development Goals ADGs If not now when If not us who Let the Advanced City be an urban revolution of now and the future to be lived not later but now not for the future cities but for the future of our cities and communities **Understanding Urbanism** Dallas Rogers,Adrienne Keane,Tooran Alizadeh,Jacqueline
