Saravanos,1992 Resilient Operation of Distribution Grids with Distributed-Hierarchical Architecture Elisabeth Drayer,2018-11-20 This thesis is about the design and the implementation of a resilient grid operation for the distribution grid This research question is induced by the advancing of three trends Decarbonisation decentralisation and digitalisation These three trends transform the hitherto passive distribution grid into an active system that contains an active operation The term resilience describes capabilities of the system to absorb to adapt and to recover from faults and disturbances This concept is realised on the one hand with the choice of the operation architecture on the other hand for the choice of possible methods and functions This thesis develops a distributed hierarchical operation architecture For this architecture several methods have been developed that optimally benefit from the operation architecture and that allow the fully automated operation of the distribution grid For that purpose a heuristic optimisation has been developed to solve problems like voltage profile violations and congestions Another important method especially with regard to resilience is the self healing capability to resupply clients after permanent faults
