

Theory Application Paper: College Student Development

Cognitive/Epistemological and Spiritual Development

Cognitive structural theories describe the process of epistemological and intellectual development during the college years (Patton, et al., 2016). Rooted in the work of Piaget, these theories focus on how people think, reason, and make meaning of their experience (Patton, et al., 2016). Spiritual development is theoretically understood as object relations maturity and contemplative spiritual awareness (Hall, 2004, 2007). Social science literature includes studies of cognitive/moral development as measured by the Commons Model of Hierarchical Complexity and of spiritual/religious development as measured by the Spiritual Assessment Inventory (Hall & Edwards, 1996, 2002), but not of the association between them. Epistemology is an area of philosophy concerned with the nature and justification of human knowledge.

A growing area of interest for psychologists and educators is that of personal epistemological development and epistemological beliefs: how individuals come to know, the theories and beliefs they hold about knowing, and the manner in which such epistemological premises a part are of and an influence on the cognitive processes of thinking and reasoning. Perry (1970) was the first to suggest that how college students made meaning of their educational experiences was not a reflection of personality but an evolving developmental process. He provided an interactionist model for interpreting students' epistemological responses to the college environment. A central contribution of the scheme has been the articulation of the dualistic, multiplicity, and relativistic points of view that characterize the epistemological outlook of many college students. Faith is differentiated from cognitive development theories because it is the activity of seeking and composing meaning from human experience. That is, faith is trying to make sense of the "big picture," trying to find an overall sense of meaning and purpose in one's life. Parks (2000) described spirituality to be a personal search for meaning, transcendence, wholeness and/or purpose. Therefore from this perspective, spirituality is at the core of religion.

Moral Development

College Administrators have expressed concerns about the moral developments of college students since the beginning of higher education, when college presidents were responsible for the moral character of the young men in their care (Thelin, 2011). Though colonial educators attached religious beliefs to morality, contemporary educators and researchers understand that morality and religion are separate constructs. Moral development in college students describes the processes through which individuals develop more complex principles and ways of reasoning about what is right, just and caring (Patton, et al., 2016). As we grow, we pass through distinct stages of moral development in which our ethical thinking is based on different principles.
