

Thermally conductive

Thermally conductive is the ability of heat to flow through.

Heat always travels from hot to cold. Heat does not travel all around.

Thermally insulating slows down heat transfer. Materials with air pockets are good insulators.

A thermally insulating slows heat transfer. Most materials are good insulators.

Thermal energy (heat) is transferred by three ways: Conduction, Convection, Radiation.

Conduction

Conduction transfers heat through objects touching.

Conduction

All objects are touching. Touching objects transfer heat faster. Energy is transferred from the warmer object to the cooler object.

Conduction transfers heat by direct contact with touching objects.

Heat transfer continues until both objects are at thermal equilibrium (the same temperature).

Conduction transfers heat through objects touching. All objects are touching. Touching objects transfer heat faster. Energy is transferred from the warmer object to the cooler object.

Convection

Convection transfers heat through moving currents in gases or liquids.

Convection transfers heat through moving currents in gases or liquids.

Convection

Heat always goes from hot to cold. Heat always goes from hot to cold. Heat always goes from hot to cold.

God's Providence and Randomness in Nature Robert John Russell, Joshua M. Moritz, 2019-02-11 In October 2014 a group of mathematicians physicists ecologists philosophers and theologians gathered at a special conference in Berkeley California to present the results of a two year research program dubbed Project SATURN This program explored many rich avenues of thought at the intersection of modern science and Christian theology Chief among them is the possibility that specific processes might be so complex that they do not have sufficient physical causes Known as ontological indeterminism this idea has profound implications for theology Specifically it allows God to be thought of as acting providentially within nature without violating the laws and processes of nature Such a momentous insight could influence how we understand free will natural evil suffering in nature and the relation between divine providence and human evolution The essays collected here discussed these topics and were initially presented at the 2014 conference Part I establishes the scientific basis for conceptualizing specific processes in the universe as inherently random and possibly indeterministic Part II discusses the philosophical and theological issues that spring from this understanding Together they represent the cutting edge of thought in the increasingly productive dialogue between science and theology Short for the Scientific and Theological Understandings of Randomness in Nature Project SATURN was created by the Center for Theology and the Natural Sciences a Program of the Graduate Theological Union Berkeley It was funded with a grant administered by Calvin College and provided by the John Templeton Foundation
