

THE BREEDING TREE

A woman with dark, wavy hair is lying on a large, moss-covered tree root in a dark, dense forest. She is wearing a sleeveless, feathered costume and has her hands behind her head, looking towards the camera. The background is filled with the trunks and branches of trees, creating a mysterious and somewhat eerie atmosphere.

Amphibian Conservation Rebecca K. Smith, William J. Sutherland, 2014-05-16 Amphibian Conservation is the fourth in the series of Synopses of Conservation Evidence linked to the online resource www.ConservationEvidence.com This synopsis is part of the Conservation Evidence project and provides a useful resource for conservationists It forms part of a series designed to promote a more evidence based approach to biodiversity conservation Others in the series include bee bird farmland and bat conservation and many others are in preparation Approximately 32% of the 7 164 amphibian species are currently threatened with extinction and at least 43% of species are declining Despite this until recently amphibians and their conservation had received little attention Although work is now being carried out to conserve many species often it is not adequately documented This book brings together and summarises the available scientific evidence and experience relevant to the practical conservation of amphibians The authors consulted an international group of amphibian experts and conservationists to produce a thorough summary of what is known or not known about the effectiveness of amphibian conservation actions across the world The book is packed with literature summaries and citations a veritable information goldmine for graduate students and researchers It also admirably provides decision makers with a well researched resource of proven interventions that can be employed to stem reverse the decline of amphibian populations John G Palis Bulletin of the Chicago Herpetological Society

The Cockatoos Edward John Mulawka, 2016-04-28 This reference book on the cockatoo family provides a comprehensive physical description of the various species of this exotic parrot the habitat they favor and their distribution and behaviors both in the wild and in captivity Their reproductive history is examined as is the possibility of breeding sufficient numbers in captivity to develop sustainable populations for re introduction to their original habitat should they become extinct in the wild The book explores the historical encounters of the various species with Europeans two centuries ago That early history provides considerable insight to the cockatoo s popularity and to efforts to breed them in captivity Many cockatoo species face a perilous future As their native forests are logged the cockatoos lose not only suitable nesting and roosting sites but native foods Additionally despite conservation laws governing the capture of wild cockatoos their desirability as an avian pet has spawned a worldwide illicit trade critically endangering some species to the point that they face extinction in the wild

Parrots of Africa, Madagascar and the Mascarene Islands Laubscher, Mike Perrin, 2012-12-01 A detailed examination of all aspects of parrots from behavior to their conservation Parrots colour and charisma coupled with the fact that they mimic human speech make them fascinating to many people They are ancient birds with unique bill and foot structures that enable them to forage on fruits in the canopy of forest trees as well as on seeds in grasslands Because they depend on fruits and seeds all year round most species are confined to the tropics or sub tropics where the world s biodiversity is at its greatest There are over three hundred species of parrots of which more than one

hundred are recognised as rare endangered vulnerable or threatened with extinction Parrots are largely distributed in tropical areas of developing countries where economies are weak and uncertain and where there is great dependence on the exploitation of natural resources particularly hard wood evergreen forests which are preferred parrot habitats Unfortunately high levels of corruption are common to these regions with much illegal trade in animals and little or no law enforcement Collectors of parrots in the first world pay huge sums for rare parrots However research education and conservation actions are greatly reducing illegal trade in African parrots This book provides complete coverage of all aspects of the biology of extant African Malagasy and Mascarene parrots and reviews our knowledge of extinct and fossil parrots from the region Particular themes include the behavioural and ecological characteristics of parrots their species characteristics and conservation biology Current concepts in avian and conservation biology are also discussed Parrots of Africa Madagascar and the Mascarene Islands is aimed at ornithologists conservation biologists avian ecologists academics bird watchers and parrot fans alike It is well illustrated with high quality original photographs and includes distribution maps figures and tables

What Works in Conservation 2021 William J. Sutherland, Lynn V. Dicks, Silviu O. Petrovan, Rebecca K. Smith, 2021-08-02 Does the creation of artificial reefs benefit subtidal benthic invertebrates Is the use of organic farming instead of conventional farming beneficial to bat conservation Does installing wildlife warning reflectors along roads benefit mammal conservation Does the installation of exclusion and or escape devices on fishing nets benefit marine and freshwater mammal conservation What Works in Conservation has been created to provide practitioners with answers to these and many other questions about practical conservation This book provides an assessment of the effectiveness of 2526 conservation interventions based on summarized scientific evidence The 2021 edition contains substantial new material on bat conservation terrestrial mammal conservation and marine and freshwater mammals thus completing the evidence for all mammal species categories Other chapters cover practical global conservation of primates amphibians bats birds forests peatlands subtidal benthic invertebrates shrublands and heathlands as well as the conservation of European farmland biodiversity and some aspects of enhancing natural pest control enhancing soil fertility management of captive animals and control of freshwater invasive species It contains key results from the summarized evidence for each conservation intervention and an assessment of the effectiveness of each by international expert panels The accompanying website www.conservationalevidence.com describes each of the studies individually and provides full references This is the sixth author approved edition of What Works in Conservation which is revised on an annual basis *A Primer of Conservation Genetics* Richard Frankham, Jonathan D. Ballou, David A. Briscoe, 2004-02-12 This concise entry level text provides an introduction to the importance of genetic studies in conservation and presents the essentials of the discipline in an easy to follow format with main points and terms clearly highlighted The authors assume only a basic knowledge of Mendelian genetics and simple statistics making the book accessible to those with a limited background in these areas Connections between conservation

genetics and the wider field of conservation biology are interwoven throughout the book Worked examples are provided throughout to help illustrate key equations and glossary and suggestions for further reading provide additional support for the reader Many beautiful pen and ink portraits of endangered species are included to enhance the text Written for short introductory level courses in genetics conservation genetics and conservation biology this book will also be suitable for practising conservation biologists zoo biologists and wildlife managers *South African Poultry Magazine and Small-holder*, 1925 *Federal Register*, 2013 **Vanished and Vanishing Parrots** Joseph Forshaw, Frank Knight, 2017-10-02 Joseph M Forshaw one of the world's leading authorities on parrots calls attention to the threats they face they are one of the most endangered groups of birds with a growing number of species nearing extinction The main threats arise from habitat loss through deforestation and agricultural development and from the taking of birds for the international live bird trade Vanished and Vanishing Parrots brings together information on species that have become extinct in historical times with information on species that are in danger of becoming extinct to increase public awareness of the plight of these magnificent birds Vivid colour plates by the wildlife artist Frank Knight draw attention to the spectacular species that we have lost or that could be lost Forshaw's work gives us fascinating insight into these endangered and extinct parrots Vanished and Vanishing Parrots will be a valuable reference for scientific ornithological and avicultural organisations as well as individual lovers of birds and of illustrated natural history books *Australian Mammals* Stephen M. Jackson, 2025-06-02 Australian Mammals Biology and Captive Management is a complete guide to the husbandry of all groups of Australian mammals This second edition has been updated based on the latest research bringing together current knowledge of the biology and behaviour of each species in captive situations and providing guidance for hand rearing It covers advances from the last 20 years including developments in assisted breeding genetic techniques updated taxonomy and the importance of Australian mammal welfare both physical and mental Written in collaboration with experts in captive management ecology and veterinary science chapters are presented for each taxonomic group of Australian mammals Each chapter covers animal welfare natural history housing requirements general husbandry feeding requirements handling and transport health requirements behaviour breeding and artificial rearing Australian Mammals provides practical guidance for zookeepers veterinarians zoologists researchers and students **Toucans, Barbets, and Honeyguides** Lester Short, Jennifer F. M. Horne, 2001-11-08 This superbly illustrated book covers in unmatched detail the life history relationships biology and conservation of all the world's toucans barbets and honeyguides The colour plates painted by well known American artist Albert Earl Gilbert are probably the best paintings of these birds ever produced **Conservation Translocations** Martin J. Gaywood, John G. Ewen, Peter M. Hollingsworth, Axel Moehrensclager, 2022-12-22 Conservation translocation the movement of species for conservation benefit includes reintroducing species into the wild reinforcing dwindling populations helping species shift ranges in the face of environmental change and moving species to enhance ecosystem function Conservation

translocation can lead to clear conservation benefits and can excite and engage a broad spectrum of people. However, these projects are often complex and involve careful consideration and planning of biological and socio-economic issues. This volume draws on the latest research and experience of specialists from around the world to help provide guidance on best practice and to promote thinking over how conservation translocations can continue to be developed. The key concepts cover project planning, biological and social factors influencing the efficacy of translocations, and how to deal with complex decision making. This book aims to inspire, inform, and help practitioners maximise their chances of success and minimise the risks of failure.

Conservation and the Genetics of Populations Fred W. Allendorf, Gordon Luikart, 2009-03-12 Conservation and the Genetics of Populations gives a comprehensive overview of the essential background concepts and tools needed to understand how genetic information can be used to develop conservation plans for species threatened with extinction. Provides a thorough understanding of the genetic basis of biological problems in conservation. Uses a balance of data and theory and basic and applied research with examples taken from both the animal and plant kingdoms. An associated website contains example data sets and software programs to illustrate population genetic processes and methods of data analysis. Discussion questions and problems are included at the end of each chapter to aid understanding. Features Guest Boxes written by leading people in the field including James F. Crow, Nancy FitzSimmons, Robert C. Lacy, Michael W. Nachman, Michael E. Soule, Andrea Taylor, Loren H. Rieseberg, R. C. Vrijenhoek, Lisette Waits, Robin S. Waples, and Andrew Young. Supplementary information designed to support Conservation and the Genetics of Populations including Downloadable sample chapter, Answers to questions and problems, Data sets illustrating problems from the book, Data analysis software programs, Website links. Australasian Marsupials and Monotremes Michael Kennedy, IUCN/SSC Australasian Marsupial and Monotreme Specialist Group, 1992 Australia, Papua New Guinea, and eastern Indonesia together share all the monotremes, egg-laying mammals of the world, and all the marsupials, pouched mammals except those of the Americas. There is an urgent need for concerted action to conserve the marsupials and monotremes of the Australasian region. Australia has the worst extinction rate for the mammals of any continent or country, and Papua New Guinea and eastern Indonesia are undergoing rapid development which, if not properly planned and controlled, could threaten the habitat of many marsupials as well as other species. This Action Plan provides an overall perspective of the problems that confront conservation agencies and NGOs in the region and recommends actions required before the year 2000.

Introduction to Conservation Genetics Richard Frankham, Jonathan D. Ballou, David Anthony Briscoe, 2010 This impressive author team brings the wealth of

advances in conservation genetics into the new edition of this introductory text including new chapters on population genomics and genetic issues in introduced and invasive species They continue the strong learning features for students main points in the margin chapter summaries vital support with the mathematics and further reading and now guide the reader to software and databases Many new references reflect the expansion of this field With examples from mammals birds reptiles fish amphibians plants and invertebrates this is an ideal introduction to conservation genetics for a broad audience The text tackles the quantitative aspects of conservation genetics and has a host of pedagogy to support students learning the numerical side of the subject Combined with being up to date its user friendly writing style and first class illustration programme forms a robust teaching package
