Sharp-beaked Finch (Twins (Twins))	Best suited to finding worms which are deep in ground	Would be good to reach deep in a bush but not wide enough.	The sharp beaks would of damaged the soft seeds and flower buds.
Large broad beak (Wide bongs)	Difficult to collect and messy for the beaks	perfectly strong and wide to pick and eat large seeds.	Too wide and too strong to collect small seeds from the floor.
Small broad beak (spoons)	Too short to dig into the soil	Too small and weak to collect large nuts found in the trees.	A small but broad beak means small good scattered over a floor would be easy

The sharp-beaked finch

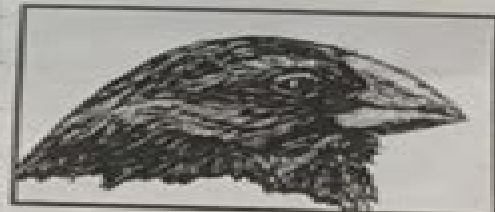

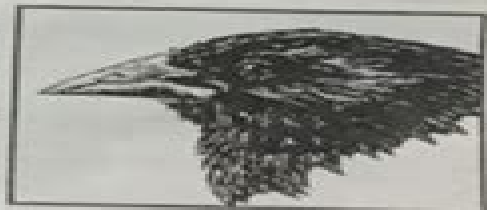

The sharp-beaked ground finch has evolved a beak which is small and sharp. This beak allows this finch to feed off the blood of other 'larger' birds such as masked boobies, red footed boobies and blue footed boobies. The sharp beaked finch will also jump on the back of other finches and suck their blood. This is unique amongst birds and the sharp-beaked ground finch is famed for these extraordinary feeding habits, so much so that it has also earned it the sinister pseudonym of the 'vampire finch'!

The large ground finch

The large ground finch evolved a large broad beak which it uses to feed on hard seeds and nuts. Woody nuts are its main food source. It forages either on the ground or in trees and bushes for its food. The islands where the large ground finch lives is abundant in plants that produce hard seeds and nuts.

The small ground finch

The small ground finch evolved a small broad beak which it uses to feed on soft seeds and nuts, although it is also known to eat flowers, buds, young leaves, and the occasional insect. Unlike the large ground finch its beak would not be strong enough to crack and eat hard nuts and seeds. It forages either on the ground or in low vegetation. The islands where the large ground finch lives is abundant in plants that produce soft seeds and flower buds.
