Phaeoglossus nigropinnatus has been a common name applied to both *Chelodactylus melanopterus*, *Chelodactylus* sp. n. and, actually, a non-existent *Sphyrna* species that existed. The latter species was first described by me in 1961 as one of several fish, *Sphyrna* sp. for which I then transferred the name *Sphyrna* to the genus *Phaeoglossus*. This name, as explained, is particularly apt for very elongate, slender and gracile species of chimaera. I am not at all certain as to whether, actually, such species exist in nature. In nature, I believe, the chimaera fish live, I am almost guaranteed that the fish *Chelodactylus* - various species and the chimaera fish that share some characters with *Sphyrna* - are very common. I am not at all certain as to whether, actually, such species exist in nature. I am not at all certain as to whether, actually, such species exist in nature.
