BREAD FOR LIFE

Did you know that bread has been around for more than 30,000 years? It is believed that prehistoric man started cooking a bread like mixture by frying it on stones. Today bread is one of the most popular foods in the world. This is because it provides long lasting energy for the body, is relatively simple to make and is inexpensive to buy. Bread is made from combining water and flour, with yeast being added to make the bread rise when baking. Most breads today contain many extra ingredients, such as grains and nutrients, as well as preservatives to prevent the bread from going stale. Bread is a very important part of our everyday diet as it provides us with the energy, fibre, nutrients and vitamins that we need to grow and repair our body. It is also a major source of carbohydrates. Carbohydrates give our body the energy needed to fuel our brain, kidneys, heart and muscles. Without carbohydrates you wouldn't have enough energy to learn at school, go for a walk with your family or even play on the playground.
