

Tips for naming molecules

There are three steps, though that I have found useful over the years. The first concerns organic molecules in their simplest form, those for primary school years.

Remember that the name of an organic molecule has three parts:

- **Numbering** (if necessary)
- **Base**: the parent chain (length and C/C bonding)
 - o Also called the stem and often simply "stem".
- **Suffix**: substituents defined by the highest priority functional group.

1. Start off by identifying the highest priority functional group: this helps you determine the suffix of the molecule's name and can help you determine where to start numbering the parent chain. In subsequent paragraphs, however, I discuss how to begin to identify the parts of the molecule that will be added to the prefix.

There only have C and H atoms left you have hydrocarbons that are based on parent hydrocarbons. The prefix is the key.

2. There begins with the longest continuous carbon chain you can find (the only "parent" hydrocarbon in use).

- Make sure that you count the longest continuous carbon chain (the highest priority functional group). Numbering begins with the end that is closest to the functional group.
 - o Carboxylic acids, aldehydes, ketones, nitriles, amines.
- Find the other side of the chain that is closest to the functional group (the number that is closest to the functional group).
- Always include the functional groups and multiple bonds in the suffix.

3. Begin to number the substituents. The number that is closest to the functional group is the number that is closest to the functional group. The number that is closest to the functional group is the number that is closest to the functional group.

- The highest priority functional group
- Any multiple bonds
- The substituents (if any)
- The number that is closest to the functional group

4. Once you have identified the parent chain, you can use the appropriate prefix to indicate the length of the chain.

5. Identify the other side of the chain that is closest to the functional group and add the number to the prefix. Additionally, identify the other side of the chain that is closest to the functional group.

- Only C/C single bonds: "and"
