| <u> false </u> | 1. A solution is a mixture containing particles that settle out of the mixture if left undisturbed.                               |
| <u> true </u>  | 2. The most abundant substance in a colloid is the dispersion medium.                                                             |
| <u> false </u> | 3. A colloid can be separated by filtration.                                                                                      |
| <u> true </u>  | 4. A solid emulsion consists of a liquid dispersed in a solid.                                                                    |

| <u> true </u>  | 8. Dispersed particles in a colloid do not tend to settle out because they have polar or charged atomic groups on their surfaces. |
| <u> false </u> | 9. Stirring an electrolyte into a colloid stabilizes the colloid.                                                                 |
