

Renal/Urinary System - Ch. 60, 61, 62

Chapter 60 - Assessment of the Renal/Urinary System

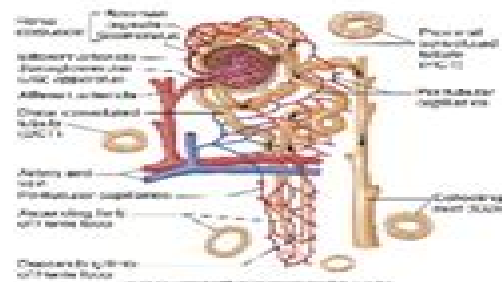

Kidneys - filter blood through nephrons

Ureters - use peristalsis to move urine from the kidneys to the bladder

Bladder - stores urine until excretion; provides continence

Urethra - urinary excretion; men (6-8 inches), women (1-1.5 inches)

Aging:

- Kidneys naturally become less effective, ↓ GFR → lose more water.
- Women have decreased muscle tone causing incontinence and nocturia.
- Men develop urinary retention due to prostate enlargement.

GU Assessment

- Patient history: holistic (environment, sexual activity, nutrition (Na & H₂O))
- Physical assessment: special considerations - peripheral edema (skin integrity), pulmonary edema (gas exchange; crackles); altered mental status from waste buildup (cognition, patient safety)
- Diagnostic assessment:
 - o Blood test - electrolytes, creatinine (by product of muscle breakdown), blood urea nitrogen (BUN) (measure of kidneys' ability to excrete waste products)
 - o Urine test - urinalysis, cultures, 24-hr urine collection (stored on ice or in refrigerator), creatinine clearance, color, clarity, pH, glucose, ketones, protein, CBC, bilirubin, bacteria, casts, nitrites, leukocytes

Radiologic and Special Diagnostic Tests	
Test	Purpose
Radiography of kidneys, ureter, and bladder (KUB) (plain film of abdomen)	• Observe presence of two kidneys • Measure kidney size • Detect gross obstruction in kidneys or urinary tract
Computed tomography (CT) with contrast, CT arteriography or angiography	• Measure kidney size • Evaluate contour to assess for injury, masses, or obstruction in kidneys or the urinary tract • Assess renal blood flow
