Chapter 5: The Working Cell*Guided Reading Activities***Big idea: Membrane structure and function**

Answer the following questions as you read modules 5.1–5.9:

1. Every cell has a(n) plasma membrane that allows it to maintain a cellular environment that is separate from the environment in which it is found.
2. Which of the following best describes the structure of a plasma membrane?
 - a. Proteins sandwiched between two layers of phospholipids
 - b. Proteins embedded in two layers of phospholipids
 - c. A layer of protein on top of a layer of phospholipids
 - d. Phospholipids sandwiched between two layers of protein
3. Biologists have described a cell's plasma membrane as being a fluid mosaic. Briefly explain why this is an accurate description. Use the figure on page 74 to help with this.
This is an accurate description because a plasma membrane is made of multiple types of molecules with many different functions (the mosaic) and the molecules are in constant motion around each other (fluid).
4. True or false: The fact that all cells have a plasma membrane supports the evolutionary linkage of all life. If false, make it a correct statement.
True
5. Match the following terms with their description: passive transport, diffusion, concentration gradient, and osmosis.
 - a. Diffusion of water across a semi-permeable membrane: osmosis
 - b. Movement across a cell membrane that requires no energy from a cell: passive transport
