

Chapter 5 – The Working Cell

Energy and the Cell

Energy is the capacity to perform work.

Kinetic energy is the energy of motion. Heat (thermal energy) is the kinetic energy associated with randomly moving molecules. Light is another form of kinetic energy.

Potential energy is the stored capacity to perform work as a result of location or structure. Chemical energy (potential energy in the bonds holding atoms together in molecules) can be converted to kinetic energy.

Laws governing energy transformations

Thermodynamics – the study of energy transformation that occurs in matter.

First Law of Thermo-dynamics = energy conservation; energy can neither be created nor destroyed

Second Law of Thermo-dynamics = entropy or disorder increases; every energy change results in disorder and the loss of heat

Chemical reactions either store or release energy

Endergonic reactions require an input of energy – Photosynthesis

Exergonic reactions result in the output of energy – Cellular respiration

Cellular metabolism is the sum total of all the endergonic and exergonic reactions in cells.

ATP (adenosine triphosphate) shuttles chemical energy and drives cellular work.

The hydrolysis (catabolic rxn) of ATP to release some of its chemical energy is an exergonic rxn. When ATP gives up energy, it forms ADP (adenosine diphosphate) and an energy shuttle P_i (inorganic phosphate)

$ATP \rightarrow ADP + P_i + \text{energy}$ (exergonic hydrolysis rxn)

$ADP + P_i + \text{energy} \rightarrow ATP$ (endergonic dehydration rxn)

Enzymes

Enzymes speed up the cell's chemical reactions by lowering chemical barriers.

Enzymes are large protein molecules that function as biological catalysts. **Catalysts** speed up a rxn without being used up or changed by the rxn.

The **energy of activation (E_a)** is the amount of energy, an "energy barrier," that must be put into an exergonic reaction before the reaction will proceed.

A specific enzyme catalyzes each cellular rxn.

The reactant in an enzyme-catalyzed reaction is the **substrate**.

One part of the enzyme binds to the substrate at the **active site**, holding the substrate in a specific position that facilitates the reaction.

Enzyme names end in **-ase**.

Sucrase catalyzes the hydrolysis of sucrose

Lipase catalyzes the hydrolysis of lipids

At the end of the rxn, the substrate changes into the product and is released, and the enzyme is unchanged.

The cellular environment affects enzyme activity; temperature, pH, [salt], cofactors

Cofactors are non protein helpers that are essential for the proper functioning; ions of zinc, iron, copper

An organic cofactor is called a **coenzyme** – vitamins

Cost Management in Plastics Processing Robin Kent, 2017-09-29 *Cost Management in Plastics Processing* Strategies, Targets, Techniques, and Tools. Fourth Edition makes readers think about current practices and how to go forward with effective cost management. This is a practical workbook that provides a structured approach to reducing costs in plastics processing for all the major plastics shaping processes: moulding, extrusion, forming, as well as elsewhere in the company, e.g. in factory services and non-manufacturing areas. Competition in all manufacturing sectors is increasing and there is continuous pressure to drive costs down and to increase cost management. Good cost management improves profits and margins, improves management control, and opens the door to becoming a world class company. The approach throughout this book looks rigorously at where costs are incurred and proposes projects and targets for cost reduction. This book is designed to provide a well-structured map broken down into simple tasks and achievable goals. This book offers a structured approach to the techniques of cost management from how costs are calculated by accountants to the effective use of machines and labor to the minimization of waste. It begins by looking at traditional methods of accounting and costing and whether these are helpful or accurate for project management. Practical examples of cost management in plastics processing are included together with many useful flow charts and diagrams to illustrate the points under discussion. Enables plastics processors to institute an effective cost management system going beyond simply trying to cut costs. Provides a holistic perspective on cost management, shining a light on areas on costs which may not have previously been considered or accounted for and proposing projects and targets for cost reduction. Serves as a route map to help companies move toward improved margins and greater profitability.
