a well established tradition of studying thought processes through the nature of language and we know much more about thinking with language than about thinking with images Piotr Kozak takes an important step towards rectifying this position Presenting a unified theory of different types of images such as diagrams maps technical drawings and photographs Kozak argues that images provide a genuine and autonomous form of content and knowledge In contrast to the propositional view of thinking and resemblance based accounts he puts forward a measurement theoretic account of images as operations that exemplify measures revealing the outcomes of measurement operations performed on a depicted situation Bringing together insights from philosophy of science picture theory cognitive science and cognitive psychology this book demonstrates that we can only understand what an image is if we truly understand the role they play in our thought processes challenging the prevailing view that the utility of images is only instrumental and cognitively inferior

**Nondescriptive Meaning and Reference** Wayne A. Davis, 2005-07-14 Nondescriptive Meaning and Reference extends Wayne Davis s groundbreaking work on the foundations of semantics Davis revives the classical doctrine that meaning consists in the expression of ideas and advances the expression theory by showing how it can account for standard proper names and the distinctive way their meaning determines their reference He also shows how the theory can handle interjections syncategorematic terms conventional implicatures and other cases long seen as difficult for both ideational and referential theories The expression theory is founded on the fact that thoughts are event types with a constituent structure and that thinking is a fundamental propositional attitude distinct from belief and desire Thought parts ideas or concepts are

distinguished from both sensory images and conceptions Word meaning is defined recursively sentences and other complex expressions mean what they do in virtue of what thought parts their component words express and what thought structure the linguistic structure expresses and unstructured words mean what they do in living languages in virtue of evolving conventions to use them to express ideas The difficulties of descriptivism show that the ideas expressed by names are atomic or basic The reference of a name is the extension of the idea it expresses which is determined not by causal relations but by its identity or content together with the nature of objects in the world Hence a name's reference is dependent on but not identical to its meaning A name is directly and rigidly referential because the extension of the idea it expresses is not determined by the extensions of component ideas The expression theory thus has the strength of Fregeanism without its descriptivist bias and of Millianism without its referentialist or causalist shortcomings The referential properties of ideas can be set out recursively by providing a generative theory of ideas assigning extensions to atomic ideas and formulating rules whereby the semantic value of a complex idea is determined by the semantic values of its components Davis also shows how referential properties can be treated using situation semantics and possible worlds semantics The key is to drop the assumption that the values of intension functions are the referents of the words whose meaning they represent and to abandon the necessity of identity for logical modalities Many other pillars of contemporary philosophical semantics such as the twin earth arguments are shown to be unfounded

*Essay on a New Theory of the Human Capacity for Representation* Karl Leonhard Reinhold, 2011-05-31 Although influential in his own day Karl Leonhard Reinhold s contribution to late 18th and early 19th century thought has long been overshadowed by the towering presence of Immanuel Kant the thinker whose ideas he helped to interpret and disseminate Today however a more nuanced understanding of Reinhold s contribution to post Kantian thought is emerging Apart from his exposition of Kant s critical philosophy which played a significant role in the development of German idealism Reinhold s role in the intellectual movement of Enlightenment and his contributions to early linguistic philosophy are now receiving scholarly attention In the English speaking world where few translations of his work have been attempted Reinhold has mostly been overlooked This imbalance is corrected in the present work the first translation into English of Reinhold s major work of philosophy the New

**Descartes's Theory of Mind** Desmond Clarke, 2003-07-24 Descartes is commonly read as the paradigm defender of substance dualism a theory caricatured by Ryle as the dogma of the ghost in the machine On this reading mind and body are defined in such a way that they have no common properties that might help explain how they interact and it is therefore impossible to provide any account of precisely those features of human experience that this theory was meant to explain Thus Descartes proposed an obvious dead end and almost any beginner in philosophy can diagnose where he went wrong Apart from its intrinsic implausibility Desmond Clarke offers good reasons for thinking that this cannot have been Descartes's view Descartes was an unrelenting critic of what Scholastics called substantial forms One cannot explain how we succeed in thinking by saying simply that we have a thinking faculty Cartesian objections to forms apply equally to substances Descartes also argued that we know nothing about substances apart from their properties so that substances are not available as independent explanatory entities Finally Descartes's own efforts to explain sensations memory imagination or the passions all involve rather speculative accounts of how the brain and the central nervous system work Clarke's compelling and important new reading shows that a failure to engage with Descartes's scientific work leads to a wholesale misunderstanding of his theory of mind It will be of great interest to scholars and students of Descartes and throughout the philosophies of mind and science
