Gaseous Detonation Physics and Its Universal Framework Theory Zonglin Jiang, Honghui Teng, 2022-12-16 This book highlights the theories and research progress in gaseous

detonation research and proposes a universal framework theory that overcomes the current research limitations Gaseous detonation is an extremely fast type of combustion that propagates at supersonic speed in premixed combustible gas Being self sustaining and self organizing with the unique nature of pressure gaining gaseous detonation and its gas dynamics has been an interdisciplinary frontier for decades The research of detonation enjoyed its early success from the development of

the CJ theory and ZND modeling but phenomenon is far from being understood quantitatively and the development of theories to predict the three dimensional cellular structure remains a formidable task being essentially a problem in high speed compressible reacting flow This theory proposed by the authors research group breaks down the limitation of the one dimensional steady flow hypothesis of the early theories successfully correlating the propagation and initiation processes of gaseous detonation and realizing the unified expression of the three dimensional structure of cell detonation The book and the proposed open framework is of high value for researchers in conventional applications such as coal mine explosions and chemical plant accidents and state of the art research fields such as supernova explosion new aerospace propulsion engines and detonation driven hypersonic testing facilities It is also a driving force for future research of detonation

Theory and Practice of Export Control Dai Tamada,Philippe Achilleas,2017-10-12 This is the first book to focus on the theoretical and practical issues of export control It combines the points of view of Japanese and French academics and practitioners including personnel at several governmental institutions and private companies Presenting the results of a collaboration between Japanese and French academics it contributes to the development of a new debate on export control Although export control has been discussed within the framework of international law in terms of peace and security its scope has now been expanded to international economic law i e WTO law and international investment law This means that in order to discuss export control appropriately the two areas of law have to be combined At the same time this topic is not only academic and theoretical but touches upon very real and practical aspects of trade export and foreign investment When we tighten embargos and economic sanctions for anti terrorism or anti nuclearization purposes we encounter more and more cases of conflict between security and the liberalization of economic relations in the world For this reason a wide range of collaborative work is needed in this area This timely book addresses various aspects of the current export control debate
