Paths to Sustainable Energy Artie Ng,Jatin Nathwani,2010-12-30 The world s reliance on existing sources of energy and their associated detrimental impacts on the environment whether related to poor air or water quality or scarcity impacts on sensitive ecosystems and forests and land use have been well documented and articulated over the last three decades What is needed by the world is a set of credible energy solutions that would lead us to a balance between economic growth and a sustainable environment This book provides an open platform to establish and share knowledge developed by scholars scientists and engineers from all over the world about various viable paths to a future of sustainable energy It has collected a number of intellectually stimulating articles that address issues ranging from public policy formulation to technological innovations for enhancing the development of sustainable energy systems It will appeal to stakeholders seeking guidance to pursue the paths to sustainable energy **Vacuum Bubbling** Yong Du Jun,2024-05-23 Vacuum Bubbling introduces the background and applications for generating bubbles under a vacuum condition accomplished through depressurization without the need to heat water It presents the advantage of utilizing vapor bubble in deaeration applications because the

diffusion for degassing happens between the water body and micro vapor bubbles without the need of membrane or packing. Instead of relying on massive heating, vacuum bubbling focuses on depressurization down to the level of saturated vapor pressure or below to secure vapor bubbles with virtually zero dissolved non-condensable gases including oxygen. The book considers prospective applications such as extracting high oxygen content air from water for underwater breathing, pretreatment of aircraft fuel before being pumped into a fuel tank system, and probable desalination applications through massive bubbling combined with low grade renewable energy. The book is intended for researchers in thermal fluids, heat and mass transfer, process engineering, and water treatment fields, and industry professionals working in power generation, plant and process engineering, transportation, and energy.
