

Experimental Probability vs. Theoretical Probability

Experimental Probability is found by repeating an experiment and observing the outcomes.

$$P(\text{event}) = \frac{\text{number of times event occurs}}{\text{total number of trials}}$$

Example:

A coin is tossed 10 times:
A head is recorded 7 times
and a tail 3 times.

$$P(\text{head}) = \frac{7}{10}$$

$$P(\text{tail}) = \frac{3}{10}$$

Theoretical Probability is what is expected to happen based on mathematics

$$P(\text{event}) = \frac{\text{number of favorable outcomes}}{\text{total number of possible outcomes}}$$

Example:

A coin is tossed.

$$P(\text{head}) = \frac{1}{2}$$

$$P(\text{tail}) = \frac{1}{2}$$

Journal of Educational Research and Extension ,1990 **A Textbook of Experimental and Theoretical Psychology** Ernest Burton Skaggs,1935 **Theoretical Foundations of Learning and Teaching** Maurice Daniel Smith,1971 *How I Wish I Had Taught Maths: Reflections on research, conversations with experts, and 12 years of mistakes* Craig Barton,2018-01-01 I genuinely believe I have never taught mathematics better and my students have never learned more I just wish I had known all of this twelve years ago Craig Barton is one of the UK's most respected teachers of mathematics In his remarkable new book he explains how he has delved into the world of academic research and emerged with a range of simple practical effective strategies that anyone can employ to save time and energy and have a positive impact on the long term learning and enjoyment of students Craig presents the findings of over 100 books and research articles from the fields of Cognitive Science Memory Psychology and Behavioural Economics together with the conversations he has had with world renowned educational experts on his Mr Barton Maths Podcast and subsequent experiments with my students and colleagues **Neurovision: Neural bases of binocular vision and coordination and their implications in visual training programs** Olivier A. Coubard,2015-10-12 Binocular vision is achieved by five neurovisual systems originating in the retina but varying in their destination within the brain Two systems have been widely studied the retino tectal or retino collicular route which subserves an expedient and raw estimate of the visual scene through the magnocellular pathway and the retino occipital or retino cortical route which allows slower but refined analysis of the visual scene through the parvocellular pathway But there also exist further neurovisual systems the retino hypothalamic retino pretectal and accessory optic systems which play a crucial role in vision though they are less understood The retino pretectal pathway projecting onto the pretectum is critical for the pupillary or photomotor reflex The retino hypothalamic pathway projecting onto the suprachiasmatic nucleus regulates numerous behavioral and biological functions as well as circadian rhythms The accessory optic system targeting terminal lateral medial and dorsal nuclei through the paraoptic fasciculus plays a role in head and gaze orientation as well as slow movements Taken together these neurovisual systems involve 60% of brain activity thus highlighting the importance of vision in the functioning and regulation of the central nervous system But vision is first and foremost action which makes perception impossible without movement Binocular coordination is a prerequisite for binocular fusion of the object of interest on the two foveas thus ensuring visual perception The retino collicular pathway is sufficient to elicit reflexive eye movements with short latencies Thanks to its motor neurons the superior colliculus activates premotor neurons which themselves activate motor neurons of the oculomotor trochlear and abducens nuclei At a higher level a cascade of neural mechanisms participates in the control of decisional eye movements The superior colliculus is controlled by the substantia nigra pars reticulata which is itself gated by subcortical structures such as the dorsal striatum The superior colliculus is also inhibited by the dorsolateral prefrontal cortex through a direct prefrontotectal tract Cortical

areas are crucial for the triggering of eye movements the frontal eye field supplementary eye field and parietal eye field Finally the cerebellum maintains accuracy The focus of the present research topic entitled Neural bases of binocular vision and coordination and their implications in visual training programs is to review the most recent findings in brain imaging and neurophysiology of binocular vision and coordination in humans and animals with frontally placed eyes The emphasis is put on studies that enable transfer of knowledge toward visual training programs targeting visual field defects e g hemianopia and binocular functional disorders e g amblyopia

Origin of Species Revisited Donald R. Forsdyke, 2001-10-09 The trail led first to Joseph Hooker and Thomas Huxley who had been both the theory's strongest supporters and its most penetrating critics and eventually to Darwin's young research associate the Victorian Georges Romanes and to the Victorian Edwardian William Bateson Although these men were well known their resolution of the origin of species paradox has either been ignored Romanes or ignored and reviled Bateson Four years after Darwin's death Romanes published a theory of the origin of species by means of physiological selection that resolved the inconsistencies in Darwin's theory and introduced the idea of a peculiarity of the reproductive system that allowed selective fertility between physiological complements Forsdyke argues that the chemical basis of the origin of species by physiological selection is actually the species dependent component of the base composition of DNA showing that Romanes thus anticipated modern biochemistry Using this new perspective Forsdyke considers some of the outstanding problems in biology and medicine including the question of how self is distinguished from not self by members of different species Finally he examines the political and ideological forces that led to Romanes' contribution to evolutionary biology which has remained unappreciated until now

Intentional Forgetting Jonathan M. Golding, Colin M. MacLeod, 2013-06-17 Research on intentional forgetting has been conducted in various forms and under various names for at least 30 years but until now no effort has been made to present these different perspectives in one place Comprising both review chapters and new empirical studies this book brings together the many research paradigms investigating intentional forgetting thereby highlighting the commonalities that link these seemingly disparate areas of research It serves as a case study of one phenomenon in memory the intention to forget or to modify memory Why is research on intentional forgetting important It helps to increase the understanding of how memory functions especially with regard to its updating In William James' booming buzzing confusion we frequently are unable to adequately process all of the information that we experience on line forgetting of some information is necessary Moreover we must often replace existing information with new information as when someone we know relocates and acquires a new address and telephone number Investigating this updating ability has been the main thrust of research on intentional forgetting specifically those studies on the directed forgetting phenomenon Cognitive experiments on directed forgetting have shown that we are able to deal more effectively with large amounts of information by following instructions to treat some of the information as to be forgotten In this way

interference is reduced and we are able to devote all of our resources to the remaining to be remembered information The mechanisms that lead to this reduction continue to promote new experiments but over a quarter century of research maintains that the directed forgetting effect is robust

Observation in the Language Classroom Dick Allwright, 2014-09-25 This book provides an account of classroom observation in a historical and educational perspective Drawing on extracts from classic studies in this field Dick Allwright reviews the development of research and experiment since the 1970 s The book thus not only provides a background to recent research but also

identifies areas for future development Stress is laid on the link to be made between practice and research and it is argued that policy making either at classroom or institutional level is heavily dependent on descriptive accounts of classroom reality
