Theory and Applications of Ontology: Computer Applications Roberto Poli, Michael Healy, Achilles

Kameas, 2010-09-02 Ontology was once understood to be the philosophical inquiry into the structure of reality the analysis and categorization of what there is Recently however a field called ontology has become part of the rapidly growing research industry in information technology The two fields have more in common than just their name Theory and Applications of Ontology is a two volume anthology that aims to further an informed discussion about the relationship between ontology in philosophy and ontology in information technology It fills an important lacuna in cutting edge research on ontology in both fields supplying stage setting overview articles on history and method presenting directions of current research in either field and highlighting areas of productive interdisciplinary contact Theory and Applications of Ontology Computer Applications presents ontology in ways that philosophers are not likely to find elsewhere The volume offers an overview of current research in ontology distinguishing basic conceptual issues domain applications general frameworks and mathematical formalisms It introduces the reader to current research on frameworks and applications in information technology in ways that are sure to invite reflection and constructive responses from ontologists in philosophy *Theory and Applications of Ontology* Roberto Poli, Johanna Seibt, Michael Healy, Achilles Kameas, 2010-12-13 Ontology is back at the forefront of philosophy science and technology These days ontology comes in at least two main fashions the traditional philosophical understanding of ontology has been recently flanked by a new computer based understanding of ontology The current resurgence of interest in ontological issues displays a number of novel features both among philosophers and among information technologists Broadly speaking the two research communities of philosophers and engineers have still not found a way to relate to each other systematically One side is perhaps too theoretical the other too pragmatic However in dynamic terms one easily foresees mounting social and institutional pressure for the development of tools able to model fragments of reality in terms that are both adequate and efficient The two volumes of TAO intend to play a role in paving the way for a better mutual understanding between engineers and philosophers Since the two communities are still very different as to their own languages conceptual tools and problem sets we devised two different volumes one dedicated to the philosophical understanding of ontology and one to the computer based understanding of ontologies Both volumes contain both papers describing the state of the art in their respective topics and papers addressing forefront innovative and possibly controversial topics *Advances in Intelligent Systems and Computing V* Natalya Shakhovska, Mykola O. Medykovskyy, 2020-12-22 This book reports on new theories and applications in the field of intelligent systems and computing It covers cutting edge computational and artificial intelligence methods advances in computer vision big data cloud computing and computation linguistics as well as cyber physical and intelligent information management systems The respective chapters are based on selected papers presented at the workshop on intelligent systems and computing held during the International Conference on

Computer Science and Information Technologies CSIT 2020 which was jointly organized on September 23-26 2020 by the Lviv Polytechnic National University Ukraine the Kharkiv National University of Radio Electronics Ukraine and the Technical University of Lodz Poland under patronage of Ministry of Education and Science of Ukraine Given its breadth of coverage the book provides academics and professionals with extensive information and a timely snapshot of the field of intelligent systems and is sure to foster new discussions and collaborations among different groups

Information Systems Development: Reflections, Challenges, and New Directions is the collected proceedings of the 20th International Conference on Information Systems Development held in Edinburgh, Scotland, August 24-26 2011. It follows in the tradition of previous conferences in the series in exploring the connections between industry, research, and education. These proceedings represent ongoing reflections within the academic community on established information systems topics and emerging concepts, approaches, and ideas. It is hoped that the papers herein contribute towards disseminating research and improving practice.

Knowledge Engineering and Knowledge Management Krzysztof Janowicz, Stefan Schlobach, Patrick Lambrix, Eero Hyvönen, 2014-11-01. This book constitutes the refereed proceedings of the 19th International Conference on Knowledge Engineering and Knowledge Management EKAW 2014 held in Linköping, Sweden, in November 2014. The 24 full papers and 21 short papers presented were carefully reviewed and selected from 138 submissions. The papers cover all aspects of eliciting, acquiring, modeling, and managing knowledge, the construction of knowledge-intensive systems and services for the Semantic Web, knowledge management, e-business, natural language processing, intelligent information integration, personal digital assistance systems, and a variety of other related topics.

Concepts, Ontologies, and Knowledge Representation Grega Jakus, Veljko Milutinović, Sanida Omerović, Sašo Tomažič, 2013-06-22. Recording knowledge in a common framework that would make it possible to seamlessly share global knowledge remains an important challenge for researchers. This brief examines several ideas about the representation of knowledge, addressing this challenge. A widespread general agreement is followed that states uniform knowledge representation should be achievable by using ontologies populated with concepts. A separate chapter is dedicated to each of the three introduced topics, following a uniform outline, definition, organization, and use. This brief is intended for those who want to get to know the field of knowledge representation quickly or would like to be up to date with current developments in the field. It is also useful for those dealing with implementation, as examples of numerous operational systems are also given.
