of Forest Trees Yuji Ide, 2021-08-16 Forest tree improvement has mainly been implemented to enhance the productivity of artificial forests However given the drastically changing global environment improvement of various traits related to environmental adaptability is more essential than ever This book focuses on genetic information including trait heritability and the physiological mechanisms thereof which facilitate tree improvement Nineteen papers are included reporting genetic approaches to improving various species including conifers broad leaf trees and bamboo All of the papers in this book provide cutting edge genetic information on tree genetics and suggest research directions for future tree improvement

18-Tom Swift and His Thermo-Ion Jetpack (HB) Victor Appleton II, 2016-09-16 The 18th book of the series Like many people Tom Swift and his father Damon have dreamed of the days when the personal jet backpacks we ve heard about since the 1940s become reality When a movie director from Hollywood comes to Tom to create the real thing he demands reality in his science fiction films with special effects it intrigues the young inventor enough to see what he might create It s a lot harder than it first appears He must convince the director that his plans to have a 1940 s period piece with leather jackets and bullet nosed SCUBA tank shaped rockets has to be updated to match what he believes might be deliverable as a real

device The suit is hijacked by the stuntman and ends up shooting him into space making necessary a search and rescue mission In the end it is up to Bud Barclay to save the day and fly the suit for the film But a sudden attack might be sending him on a collision course with death Can Tom rescue his best friend and save the movie

Rare Diseases Research and Diagnosis in Low- and Middle-Income

Countries Claudia Gonzaga-Jauregui, Vajira Dissanayake, Ferran Casals, Aradhana Dwivedi, Kawmadi Gunawardena, 2025-09-23 Rare diseases RDs encompass more than 7000 described disorders characterized by a low prevalence in the general population Collectively these disorders affect between 6 to 8% of the world population that is approximately 300 350 million people worldwide The majority of RDs involve an underlying genetic component and more than 6 000 conditions have been linked to a known molecular cause In the last 13 years the adoption of human genomic sequencing has enabled the more efficient and accurate diagnosis and research of rare genetic disorders Genomic sequencing has become a first tier diagnostic test for many patients with congenital syndromes and suspected genetic disorders in high income countries as well as an effective method for the study of undiagnosed and novel genetic disorders in the research arena The implementation of genomic sequencing has dramatically changed the diagnosis and research of rare diseases in high income countries In contrast the reality in low and middle income countries LMICs is strikingly different where disparities on accessibility to these technologies exist The high cost of genomic sequencing and other molecular technologies remains a limiting factor in the common implementation of these methods for diagnosis and research of rare diseases in resource limited settings The study of rare genetic diseases in LMICs may be underestimated when compared to large scale genomic studies performed in developed countries despite being performed under much strained circumstances Consequently research publications on the genetics of RDs within LMICs might be underrepresented in the literature limiting the understanding of genetic and phenotypic variability across populations and contributing to the lack of representation of non European individuals in genetic studies This Research Topic aims to provide an opportunity for researchers and clinicians from LMICs who are dedicated to the study of rare genetic disorders to share their findings with the global

genetics scientific community as well as their challenges and perspectives on the implementation of modern technologies and approaches for the diagnosis and study of rare genetic disorders

Emerging Anti-cancer Compounds and Immunomodulators for Pancreatic Cancer Treatment

Stephen Safe, Jennifer M. Bailey-Lundberg, Kathleen E.

DelGiorno, 2024-04-29 Pancreatic cancer is a highly lethal gastrointestinal disease that is becoming one of the leading causes of cancer mortality worldwide. Despite advances in surgery, radiation therapy, immunology, and therapeutics, the 5-year survival rate for pancreatic cancer patients remains around 12%. The poor prognosis is mainly due to late diagnosis as pancreatic cancer patients commonly do not exhibit symptoms until an advanced stage that is beyond surgical resection.

Currently, the main treatments for patients with advanced pancreatic cancer are chemotherapy, radiotherapy, and most recent clinical trials incorporate immunotherapy.
