 large road networks has become far more rapid and detailed and many exciting developments in this field have emerged  
 Within this volume the authors describe the simulation of automobile pedestrian and rail traffic coupled to new applications  
 such as the embedding of traffic simulation into driving simulators to give a more realistic environment of driver behavior  
 surrounding the subject vehicle New approaches to traffic simulation are described including the hybrid mesoscopic  
 microscopic model and floor field agent based simulation Written by an invited panel of experts this book addresses students  
 engineers and scholars as well as anyone who needs a state of the art overview of transport simulation today      **Dynamic  
 Fleet Management** Vasileios S. Zeimpekis,Christos D. Tarantilis,George M. Giaglis,Ioannis E. Minis,2007-10-05 Dynamic  
 Fleet Management will focus on real time management of a distribution system This means that when a dynamic event  
 occurs within the distribution chain action must be taken in real time The book will integrate the latest results in system  
 design algorithm development and system implementation to capture the state of the art research and application trends  
 While much of the research in this area of transportation problems have almost exclusively concentrated on carrying out  
 static plans on optional distribution conditions this book will examine those problems when some dynamic or unplanned even  
 occurs within the transport or network system It will focus specifically on these cases and integrate the latest results in  
 systems routing algorithms and case studies where information a dynamic event is revealed to the decision maker in a real  
 time manner      **Control Strategies for Advanced Driver Assistance Systems and Autonomous Driving Functions**
