Indirect calorimetry Walter Gerrits, Etienne Labussière, 2023-08-07 The use of indirect calorimetry to measure the heat production of men and animals has increased rapidly since the pioneering work of Lavoisier Measurement of the consumption of oxygen and production of carbon dioxide are the basis for the measurement of heat production Today applications of indirect calorimetry are available in many species Combining these measurements with accurate climate control recording of physical activity and feed intake use of stable isotopes and sophisticated modelling techniques allow scientists to make progress in various research areas This book provides a scientific basis for indirect calorimetry dealing with smart ways to design calorimeters gas measurements and computational techniques to deal with complex data Novel techniques allow the connection between short term changes in energy expenditure protein turnover and substrate oxidation e g using stable isotopes Various applications of indirect calorimetry are addressed including heat production measurements in growing animals hatching eggs companion animals and in animals housed under heat stress conditions In addition various ways of measuring methane emissions are discussed This book is intended for scientists working or interested in calorimetry or metabolism research or people designing calorimetry systems opening their eyes for applications they did not yet think of

Energy and protein metabolism and nutrition in sustainable animal production James W. Oltjen, E. Kebreab, Hélène Lapierre, 2013-11-04 As world population increases demand for food and particularly animal products is expected to grow substantially Because of limited area for expansion of animal agriculture and growing consumer concern for the environmental impact of animal production gains in animal efficiency will have to be part of the solution This book addresses key issues of how energy and protein are utilized and interact in farm animals from the molecular to the whole animal and even to the herd or group level of organization It contains state of the art research and reviews on several topics of nutrient utilization and metabolism from top scientists worldwide Key issues addressed include energy protein interactions methodology such as in vitro and in vivo techniques regulation including pre natal programming and endocrine regulation modeling and systems biology including a tribute to the late Professor R Lee Baldwin of the University of California Davis a leader in the field products and health of animals tissue metabolism and environmental sustainability in agriculture This book is a valuable resource for researchers students policy makers producers and industry

professionals believing that a better understanding of metabolism and nutrition of farm animals is part of the solution

Methane emissions in livestock and rice systems Food and Agriculture Organization of the United Nations, 2023-09-25

Impact of Climate Change on Water Resources in Agriculture Cornelio Alberto Zolin, Renato de A. R. Rodrigues, 2015-07-24 Climate change and its impact on water resources in agriculture pose one of the biggest challenges for food energy fiber and water security worldwide and as a consequence for society This book presents a multidisciplinary approach towards climate change and water resources in agriculture and provides a comprehensive perspective about the core **Methods for Measuring Greenhouse Gas Balances and Evaluating Mitigation Options in Smallholder Agriculture** Todd S. Rosenstock, Mariana C. Rufino, Klaus Butterbach-Bahl, Lini Wollenberg, Meryl Richards, 2016-08-23 This book provides standards and guidelines for quantifying greenhouse gas emissions and removals in smallholder agricultural systems and comparing options for climate change mitigation based on emission reductions and livelihood trade offs Globally agriculture is directly responsible for about 11% of annual greenhouse gas GHG emissions and induces an additional 17% through land use change mostly in developing countries Farms in the developing countries of sub Saharan Africa and Asia are predominately managed by smallholders with 80% of land holdings smaller than ten hectares However little to no information exists on greenhouse gas emissions and mitigation potentials in smallholder agriculture Greenhouse gas measurements in agriculture are expensive time consuming and error prone challenges only exacerbated by the heterogeneity of smallholder systems and landscapes Concerns over methodological rigor measurement costs and the diversity of approaches coupled with the demand for robust information suggest it is germane for the scientific community to establish standards of measurements for quantifying GHG emissions from smallholder agriculture Standard guidelines for use by scientists development organizations will help generate reliable data on emissions baselines and allow rigorous comparisons of mitigation options The guidelines described in this book developed by the CGIAR Research Program on Climate Change Agriculture and Food Security CCAFS and partners are intended to inform anyone conducting field measurements of agricultural greenhouse gas sources and sinks especially to develop IPCC Tier 2 emission factors or to compare mitigation options in smallholder systems *Soil Respiration and the Environment* Luo Yiqi, Xuhui Zhou, 2010-07-20 The global environment is constantly changing and our planet is getting warmer at an unprecedented rate The study of the carbon cycle and soil respiration is a very active area of research internationally because of its relationship to climate change

It is crucial for our understanding of ecosystem functions from plot levels to global scales. Although a great deal of literature on soil respiration has been accumulated in the past several years, the material has not yet been synthesized into one place until now. This book synthesizes the already published research findings and presents the fundamentals of this subject. Including information on global carbon cycling, climate changes, ecosystem productivity, crop production, and soil fertility, this book will be of interest to scientists, researchers, and students across many disciplines. A key reference for the scientific community on global climate change, ecosystem studies, and soil ecology. Describes the myriad ways that soils respire and how this activity influences the environment. Covers a breadth of topics ranging from methodology to comparative analyses of different ecosystem types. The first existing treatise on the subject. *Soil Carbon Dynamics* Werner L. Kutsch, Michael Bahn, Andreas Heinemeyer, 2010-01-07. Carbon stored in soils represents the largest terrestrial carbon pool, and factors affecting this will be vital in the understanding of future atmospheric CO₂ concentrations. This book provides an integrated view on measuring and modeling soil carbon dynamics. Based on a broad range of in-depth contributions by leading scientists, it gives an overview of current research, concepts, developments, and outlooks, and introduces cutting-edge methodologies ranging from questions of appropriate measurement design to the potential application of stable isotopes and molecular tools. It includes a standardised soil CO₂ efflux protocol aimed at data consistency and inter-site comparability and thus underpins a regional and global understanding of soil carbon dynamics. This book provides an important reference work for students and scientists interested in many aspects of soil ecology and biogeochemical cycles, policy makers, carbon traders, and others concerned with the global carbon cycle. *Natural Compounds/Products and Livestock Productivity: Enhancing Antioxidant Levels, Gut Health, Mitigating Greenhouse Gas Emissions, and Disease Control* Moyosore Joseph Adegbeye, Valiollah Palangi, Sadarman Sadarman, Abdelfattah Z. M. Salem, 2025-09-26. Livestock productivity is crucial for agricultural sustainability and food security, facing the dual challenges of enhancing production while reducing environmental impacts and safeguarding animal welfare. The exploration of natural compounds from plants and other organic sources has emerged as a promising avenue to bolster livestock production. Natural compounds are increasingly recognized for their potential to improve antioxidant defenses, promote gut health, mitigate greenhouse gas emissions, and prevent diseases. The transition towards utilizing natural compounds reflects a broader shift toward sustainable livestock practices that address both productivity enhancements and critical environmental and health issues. This Research Topic aims to assemble pioneering research on the diverse array of natural compounds applicable in livestock environments. With a focus on microbial agents, herbal extracts, spices, and other organic materials, this collection explores their impact on boosting productivity, enhancing antioxidant capacity, and managing gut microbiology. Recent studies underscore the benefits of integrating specific natural compounds into animal feed, which notably boosts antioxidant levels, thereby enhancing animal health and resistance to oxidative stress. Additionally, the use of probiotics and prebiotics is gaining traction for improving gut health and nutrient

uptake crucial for overall livestock productivity and welfare Moreover some natural compounds have been shown to effectively reduce methane outputs from livestock thus contributing significantly to environmental conservation efforts
