Technical Analysis - Myth or Magic? Christian Koessler, 2010-12-23 Inhaltsangabe Introduction The following paper will outline the suitability of Technical Analysis TA regarding selective chosen tools for performance increase versus the classic Buy and Hold Strategy BHS These two approaches beside the Fundamental Analysis FA are the foundations used by investors concerning their Investment strategy and differ substantially in their nature Thereby this dissertation will investigate whether the application of active TA is a productive approach yielding to favourable results and having the ability to outperform the passive BHS To achieve substantive results the comparisons of performances will be stretched to 21 years and are based on the following three indices which differ significantly concerning their location volume and importance Standard 200 days and 100 days Moving

Average Convergence Divergence Bollinger Bands Oscillators Relative Strength Index Slow Stochastic Momentum TA can be divided into Chartism and the statistical based TA Although a clear demarcation between these groups is not given in reality as most proponents of TA combine both techniques The vast majority of this dissertation will only reflect the latter This can also be justified as Chartists predict future price developments based on trend lines patterns and formations Murphy 1999 states that all Chartists are Technical Analysts but not all Technical Analysts are Chartists Due to the lack of standardised price characteristics Chartism implies a high degree of subjectivity Therefore the absence of operational ability of this sub area would not lead to a feasible analysis concerning an increase in performance We maintain that financial markets are either moving in boom or bust cycles Bull or Bear Markets The classic BHS based on the Investment Legend Benjamin Graham has generated high profits in the Technical Analysis and Stock Market Profits R. Schabacker, 2021-02-15 Richard W Schabacker's great work Technical Analysis and Stock Market Profits is a worthy addition to any technical analyst's personal library or any market library His pioneering research represents one of the finest works ever produced on technical analysis and this book remains an example of the highest order of analytical quality and incisive trading wisdom Originally devised as a practical course for investors it is as alive vital and instructional today as the day it was written It paved the way for Robert Edwards and John Magee's best selling Technical Analysis of Stock Trends a debt which is acknowledged in their foreword Part One is based in large part on the pioneer researches and writings of the late Richard Schabacker Schabacker presents technical analysis as a totally organized subject and comprehensively lays out the various important patterns formations trends support and resistance areas and associated supporting technical detail He presents factors that can be confidently relied on and gives equal attention to the blemishes and weaknesses that can upset the best of analytical forecasts Factors which investors would do well to absorb and apply when undertaking the fascinating game of price time and volume analysis
