Ecosystem Services, Biodiversity and Environmental Change in a Tropical Mountain Ecosystem of South Ecuador Jörg Bendix, Erwin Beck, Achim Bräuning, Franz Makeschin, Reinhard Mosandl, Stefan Scheu, Wolfgang Wilcke, 2013-07-09 An interdisciplinary research unit consisting of 30 teams in the natural economic and social sciences analyzed biodiversity and ecosystem services of a mountain rainforest ecosystem in the hotspot of the tropical Andes with special reference to past, current and future environmental changes. The group assessed ecosystem services using data from ecological field and scenario-driven model experiments and with the help of comparative field surveys of the natural forest and its anthropogenic replacement system for agriculture. The book offers insights into the impacts of environmental change on various service categories mentioned in the Millennium Ecosystem Assessment 2005: cultural, regulating, supporting and provisioning ecosystem services. Examples focus on biodiversity of plants and animals including trophic networks and abiotic/biotic parameters such as soils, regional climate, water, nutrient and sediment cycles. The types of threats considered include land use and climate changes as well as atmospheric fertilization. In terms of regulating and provisioning services, the emphasis is primarily on water regulation and supply as well as climate regulation and carbon sequestration. With regard to provisioning services, the synthesis of the book provides science-based recommendations for a sustainable land use portfolio including several options such as forestry, pasture management and the practices of indigenous peoples. In closing, the authors show how they integrated the local society by pursuing capacity building in compliance with the CBD ABS Convention on Biological Diversity Access and Benefit Sharing in the form of education and knowledge transfer for application

available at <http://www.ScholarlyEditions.com> *Deep Learning Strategies for Security Enhancement in Wireless Sensor Networks* Sagayam, K. Martin, Bhushan, Bharat, Andrushia, A. Diana, Albuquerque, Victor Hugo C. de, 2020-06-12 Wireless sensor networks have gained significant attention industrially and academically due to their wide range of uses in various fields. Because of their vast amount of applications, wireless sensor networks are vulnerable to a variety of security attacks. The protection of wireless sensor networks remains a challenge due to their resource constrained nature, which is why researchers have begun applying several branches of artificial intelligence to advance the security of these networks. Research is needed on the development of security practices in wireless sensor networks by using smart technologies. *Deep Learning Strategies for Security Enhancement in Wireless Sensor Networks* provides emerging research exploring the theoretical and practical advancements of security protocols in wireless sensor networks using artificial intelligence based techniques. Featuring coverage on a broad range of topics such as clustering protocols, intrusion detection, and energy harvesting, this book is ideally designed for researchers, developers, IT professionals, educators, policymakers, practitioners, scientists, theorists, engineers, academicians, and students seeking current research on integrating intelligent techniques into sensor networks for more reliable security practices. *Some Musings on Theta, Eta, and Zeta* Floyd L. Williams, 2023-11-02 This book continues the applications of mathematics, more specifically of theta, eta, and zeta functions and modular forms, to various areas of theoretical physics. It is a follow up and extension, in some sense, of the author's earlier book entitled *A window into zeta and modular physics*. Some of the main topics are: 1. A new approach to logarithmic corrections to black hole entropy. 2. My recent work that provides for an explicit cold plasma black hole connection. 3. Generalization of work of physicists on certain asymptotic problems relating to string theory, for example, by way of the general theory of modular forms of non-positive weight. 4. A construction of the E_8 root lattice, its theta function, and its relevance for heterotic string theory. 5. Applications of elliptic functions to KdV, nonlinear Schrödinger, and Duffing equations, for example, including a discussion of Lax pairs and the Miura transformation. 6. Finite temperature zeta functions and partition functions for quantum fields in thermal equilibrium on various curved background spacetimes. 7. Exact solutions of the Einstein gravitational field equations for Lemaitre and inhomogeneous cosmological models, with a special focus on the Szekeres-Szafron exact solutions by way of the Weierstrass elliptic function. 8. Elementary particles and my zeta function formula for higher spin fermionic particles; this covers, in particular, the gravitino particle of spin $3/2$ and bosons with integral spin $s = 2, 3, 4, 5$. These are some sample topics. Others include the continuous Heisenberg model, reaction-diffusion systems, Dirichlet and Hecke L functions, the modular j invariant, the computation of the one-loop effective potential for non-compact symmetric spaces, the BTZ black hole, Jacobi inversion formulas, etc. Thus, there is a very large range of material with the first 9 chapters of preliminary expository background for mathematicians and physicists. **Handbook of Research on Entrepreneurship, Innovation, Sustainability, and ICTs in the Post-COVID-19 Era** Carvalho, Luisa Cagica, Reis, Leonilde, Silveira,

Masters of the Universe Helge Kragh, 2014-11-20 How did our modern picture of the universe come into being *Masters of the Universe* tells this fascinating story in an unusual format that blends factual and fictional elements It is based on a series of interviews that a fictional person conducted with leading astronomers and physicists between 1913 and 1965 Among the interviewed scientists are giants such as Albert Einstein Edwin Hubble and George Gamow but also scientists who are less well known today or not primarily known as cosmologists such as Karl Schwarzschild Paul Dirac and Svante Arrhenius By following the interviews the reader gets a lively and almost authentic impression of the problems that faced this early generation of cosmologists Although the interviews are purely fictional a product of the author's imagination they could have taken place in just the way that is described They are solidly based on historical facts and moreover supplemented with careful annotations and references to the literature In this way the book bridges the gap between scholarly and popular history of science
