Unsw Mechanical Engineering Building:

IUTAM Symposium on Emerging Trends in Rotor Dynamics K. Gupta, 2011-01-06 Rotor dynamics is an important branch of dynamics that deals with behavior of rotating machines ranging from very large systems like power plant rotors for example a turbogenerator to very small systems like a tiny dentist's drill with a variety of rotors such as pumps compressors steam gas turbines motors turbopumps etc as used for example in process industry falling in between The speeds of these rotors vary in a large range from a few hundred RPM to more than a hundred thousand RPM Complex systems of rotating shafts depending upon their specific requirements are supported on different types of bearings There are rolling element bearings various kinds of fluid film bearings foil and gas bearings magnetic bearings to name but a few The present day rotors are much lighter handle a large amount of energy and fluid mass operate at much higher speeds and therefore are most susceptible to vibration and instability problems This has given rise to several interesting physical phenomena some of which are fairly well understood today while some are still the subject of continued investigation Research in rotor dynamics started more than one hundred years ago The progress of the research in the early years was slow However with the availability of larger computing power and versatile measurement technologies research in all aspects of rotor dynamics has accelerated over the past decades The demand from industry for light weight high performance and reliable rotor bearing systems is the driving force for research and new developments in the field of rotor dynamics The symposium proceedings contain papers on various important aspects of rotor dynamics such as modeling analytical computational and experimental methods developments in bearings dampers seals including magnetic bearings rub impact and foundation effects turbomachine blades active and passive vibration control strategies including control of instabilities nonlinear and parametric effects fault diagnostics and condition monitoring and cracked rotors This volume is of immense value to teachers researchers in educational institutes scientists researchers in R D laboratories and practising engineers in industry

Australian Journal of Mechanical Engineering ,2003 **Architecture, Building Materials and Engineering Management** He Tao Hou, Li Tian, 2013-08-08 Selected peer reviewed papers from the 2013 International Conference on Civil Architecture and Building Materials 3rd CEABM 2013 May 24-26 2013 Jinan China **Urban Heat Stress and Mitigation Solutions** Vincenzo Costanzo, Gianpiero Evola, Luigi Marletta, 2021-09-08 This book provides the reader with an understanding of the impact that different morphologies construction materials and green coverage solutions have on the urban microclimate thus affecting the comfort conditions of urban inhabitants and the energy needs of buildings in urban areas The book covers the latest approaches to energy and outdoor comfort measurement and modelling on an urban scale and describes possible measures and strategies to mitigate the effects of the mutual interaction between urban settlements and local microclimate Despite its relevance only limited literature is currently devoted to appraising from an engineering perspective the intertwining relationships between urban geometry and fabrics energy fluxes between buildings and their

surroundings outdoor microclimate conditions and building energy demands in urban areas This book fills this gap by first discussing the physical processes that govern heat and mass transfer at an urban scale while emphasizing the role played by different spatial arrangements manmade materials and green infrastructures on the outdoor microclimate The first chapters also address the implications of these factors on the outdoor comfort conditions experienced by pedestrians and on the buildings energy demand for space heating and cooling Then based upon cutting edge experimental activities and simulation work this book demonstrates current and forthcoming adaptation and mitigation strategies to improve the urban microclimate and its impact on the built environment such as cool materials thermochromic and retroreflective finishing materials and green infrastructures applied either at a building scale or at the urban scale The effect of these solutions is demonstrated for different cities worldwide under a range of climate conditions Finally the book opens a wider perspective by introducing the basic elements that allow fuel poverty raw materials consumption and the principles of circular economy in the definition of a resilient urban settlement

Handbook of Construction Safety, Health and Well-being in the Industry 4.0 Era Patrick Manu, Gao Shang, Paulo Jorge Silva Bartolo, Valerie Francis, Anil Sawhney, 2023-05-12 This Handbook seeks to examine and advance current understanding of the confluence of construction health safety and well being and the broad range of Industry 4.0 technologies in use in the architecture engineering and construction AEC industry Globally the construction sector accounts for more than 100 000 occupational fatalities annually In many countries reports of work related accidents injuries and illnesses are commonplace and there is an urgent need to improve the occupational safety and health OSH outlook of the construction sector The fourth industrial revolution presents opportunities to leverage modern technologies e.g. big data artificial intelligence automation sensors AR VR and robotics to improve the poor OSH performance of the construction industry However embracing such technologies could also induce unintended adverse consequences for the safety health and well being of construction workers Therefore the realisation of the opportunities as well as the mitigation of potentially adverse consequences requires research informed holistic insights around the union of Industry 4.0 and construction occupational safety and health management This cutting edge volume addresses a significant gap in literature by bringing together experienced academics and researchers to highlight the drivers opportunities and drawbacks of the merging of Industry 4.0 with construction health safety and well being After a detailed introductory section which highlights key issues and challenges section one covers the application of a broad range of digital technologies then section two discusses the application of industrial production and cyber physical systems in the context of construction safety and health management Readers from a broad range of AEC backgrounds as well as safety professionals and technologists will come to understand how the technologies are applied and the resulting OSH benefits as well as potential drawbacks

Using Technology Tools to Innovate Assessment, Reporting, and Teaching Practices in Engineering Education Alam, Firoz, 2014-01-31 Many can now conclude that utilizing educational technologies can be considered the primary tools to

inspire students to learn Combining these technologies with the best teaching and learning practices can engage in creativity and imagination in the engineering field Using Technology Tools to Innovate Assessment Reporting and Teaching Practices in Engineering Education highlights the lack of understanding of teaching and learning with technology in higher education engineering programs while emphasizing the important use of this technology This book aims to be essential for professors graduate and undergraduate students in the engineering programs interested learning the appropriate use of technological tools **Australian National Bibliography** ,1996-12 **Following the Sun** Robin Tennant-Wood,2012-10-01 In 1970 a

small group of physicists at The Australian National University decided to veer away from the accepted and expected directions in energy research and pursued the emerging discipline of solar energy Over the next decade ANU joined a small cluster of research institutions including the CSIRO UNSW and the University of Sydney to emerge as a world leader in solar energy technology This book traces the history of solar energy research at ANU over 35 years from its origin its sometimes controversial early stages through its flagship projects to its current status as one of the world s best known solar energy research establishments It is as much a story of the future as it is a history Following the sun is the story of how an idea to pursue what was in 1970 a new and unpopular research path has come to underpin sustainable development in the 21st Century **Bulk Solids Handling** ,2003 **Vestes** ,1974 The University of New South Wales Albert Henry Willis,1983
