Vva Recommended Practices Guide:

Conceptual Modeling for Discrete-Event Simulation Stewart Robinson, Roger Brooks, Kathy Kotiadis, Durk-Jouke Van Der Zee, 2010-08-02 Bringing together an international group of researchers involved in military business and health modeling and simulation Conceptual Modeling for Discrete Event Simulation presents a comprehensive view of the current state of the art in the field The book addresses a host of issues including What is a conceptual model How is conceptual modelin Simulation and Modeling of Systems of Systems Pascal Cantot, Dominique Luzeaux, 2013-03-04 Systems engineering is the design of a complex interconnection of many elements a system to maximize a specific measure of system performance It consists of two parts modeling in which each element of the system and its performance criteria are described and optimization in which adjustable elements are tailored to allow peak performance Systems engineering is applied to vast numbers of problems in industry and the military An example of systems engineering at work is the control of the timing of thousands of city traffic lights to maximize traffic flow The complex and intricate field of electronics and computers is perfectly suited for systems engineering analysis and in turn advances in communications and computer technology have made more advanced systems engineering problems solvable Thus the two areas fed off of one another This book is a basic introduction to the use of models and methods in the engineering design of systems It is aimed at students as well as practicing engineers The concept of the systems of systems is discussed extensively after a critical comparison of the different definitions and a range of various practical illustrations It also provides key answers as to what a system of systems is and how its complexity can be mastered Human Factors in Simulation and Training Peter A. Hancock, Dennis A. Vincenzi, John A. Wise, Mustapha Mouloua, 2008-12-17 Discussing issues and concepts relating to human factors in simulation this book covers theory and application in fields such as space ships submarines naval aviation and commercial aviation The authors develop and expand on concepts in simulator usage particularly specific characteristics and issues of simulation and their effect on the validity and functionality of simulators as a training device The chapters contain in depth discussions of these particular characteristics and issues They also incorporate theories pertaining to the motivational aspects of training simulation of social events and PC based simulation *Methodologies for the Analysis, Design and Evaluation of Laparoscopic Surgical Simulators* Pablo Lamata de la Orden, 2007 The problem addressed in this PhD thesis is how to offer an effective and efficient VR means of training in laparoscopic surgery The question is to determine what makes it a useful didactic tool This work is conceived to be a bridge between surgical tra The Fiscal Year 2010 Budget for Veterans' Programs United States. Congress. Senate. Committee on Veterans' Affairs, 2010 *Modeling Human Behavior With Integrated Cognitive Architectures* Kevin A. Gluck, Richard W. Pew, 2006-04-21 Resulting from the need for greater realism in models of human and organizational behavior in military simulations there has been increased interest in research on integrative models of human performance both within the cognitive science community generally and within the defense and

aerospace industries in particular This book documents accomplishments and lessons learned in a multi year project to examine the ability of a range of integrated cognitive modeling architectures to explain and predict human behavior in a common task environment that requires multi tasking and concept learning This unique project called the Agent Based Modeling and Behavior Representation AMBR Model Comparison involved a series of human performance model evaluations in which the processes and performance levels of computational cognitive models were compared to each other and to human operators performing the identical tasks In addition to quantitative data comparing the performance of the models and real human performance the book also presents a qualitatively oriented discussion of the practical and scientific considerations that arise in the course of attempting this kind of model development and validation effort The primary audiences for this book are people in academia industry and the military who are interested in explaining and predicting complex human behavior using computational cognitive modeling approaches The book should be of particular interest to individuals in any sector working in Psychology Cognitive Science Artificial Intelligence Industrial Engineering System Engineering Human Factors Ergonomics and Operations Research Any technically or scientifically oriented professional or student should find the material fully accessible without extensive mathematical background **Proceedings of the ...**
