

FMS Compliance in the P-RNAV Environment

Performance-Based Navigation (P-RNAV) defines the minimum performance and functional requirements appropriate for Terminal Area (P-RNAV) operations, and includes navigation data integrity requirements and flight crew procedures. European states are progressively introducing P-RNAV procedures across the Terminal Areas of the European Civil Aviation Conference (ECAC). While there is no European-wide mandate, P-RNAV is outlined by a National Aviation Information Circular (NAIC).

Operations not approved for P-RNAV operations and deviating conventional procedures are unable to take advantage of the benefits of their RNAV equipment, which include a faster, more direct routes. Additionally, in Terminal Areas where RNAV procedures have been introduced, the application of conventional procedures and radar vectoring by Air Traffic Service Providers to accommodate non-P-RNAV approved flights may

negatively affect airport capacity and increase delays. Therefore, many European airports are placing restrictions on aircraft that aren't fully compliant with the P-RNAV standards. Amsterdam Schiphol Airport was the first airport in Europe to only allow such aircraft. Other airports that have since followed include London Heathrow, Geneva, Zürich, Vienna International, Stockholm-Årlanda, Brussels, Málaga, Nice Côte d'Azur, Paris-Charles de Gaulle, and many more. Universal's Flight Management Systems (FMS) with Software-Control Member (SCM) 800X/900X and later ensure complete compliance with the objectives contained in the P-RNAV regulatory documents. With SCMs prior to 800X/900X, multiple deviations exist and operators will have to put in to place an alternate means of compliance for specific P-RNAV regulations, as outlined in ICAO guidance document TCAT-08a, 1.

Cessna 525 CJ1 and CJ2: Coupled Approach Capability with Pro Line 21[®]

Until recently, a limitation in the Rockwell Collins Pro Line 21[®] EFIS system had not allowed Universal Avionics FMS to vertically couple to the autopilot in Cessna 525 CJ1 and CJ2 aircraft. In January of 2013, Cessna, Rockwell Collins and Universal Avionics came together in an effort to provide a solution for customers. The agreement paved the way for Rockwell Collins to make necessary modifications to the Pro Line 21 EFIS and Flight Guidance System interface to allow vertically coupled approach capability with Universal Avionics FMS.

Universal Avionics is happy to announce that a new interface between the FMS and Pro Line 21 which provides vertical coupling as approach is now approved for installation. The installation of the amended TC certification was performed via a Cessna Service Center Mod EO based on type-certified data.

Service Bulletins are currently in work to allow Cessna Service Centers to perform installations. Operators should contact their Service Center for more information regarding installation of this mod.
