Originally published in hardcover in 2021 by Simon Schuster. *Ubering: the "Rideshare" Story* Rafael Fermoselle, 2019-12-22

There are a few creations that have become products because they became dominant in the market and synonymous with an entire product category. Genericized names include Frigidaire which became synonymous with refrigerator, Xerox which became synonymous with photocopying, and Kleenex which became synonymous with tissues. That has been the case with Uber which has become identical with rideshare. Despite rapid growth since 2010, Uber has not become profitable, is carrying a cumulative loss of over 15 billion as of November 2019, and it is doubtful if it will ever become profitable. Despite becoming an eponym, a key component of the gig economy, and inspiring numerous copycats, there is no guarantee that Uber will be able to generate an adequate return on investment and remain in business. The concept has fatal flaws that impair its legal soundness. In the end, consumers and society determine if any business succeeds or fails. Government regulations are largely non-partisan and exist to protect society, the general welfare, and the free enterprise system. Uber and the ride share concept may be plowed under by regulations that exist to protect the public interest. However, regulations sometimes backfire and cause unintended consequences. Road to Nowhere Paris Marx,2025-08-12 How to build a transportation system to provide mobility for all *Road to Nowhere* exposes the flaws in Silicon Valley's vision of the future ride hailing services such as Uber and Lyft to take us anywhere electric cars to make them green and automation to ensure transport is cheap and ubiquitous Such promises are implausible and potentially dangerous As Paris Marx shows these technological visions are a threat to our ideas of what a society should be Electric cars are not a silver bullet for sustainability and autonomous vehicles won't guarantee road safety There will not be underground tunnels to eliminate traffic congestion and micromobility services will not replace car travel any sooner than we will see the arrival of the long awaited flying car In response Marx offers a vision for a more collective way of organizing transportation systems that considers the needs of poor marginalized and vulnerable people The book argues that rethinking mobility can be the first step in a broader reimagining of how we design and live in our future cities

We must create streets that allow for social interaction and conviviality We need reasons to get out of our cars and to use public means of transit determined by community needs rather than algorithmic control Such decisions should be guided by the search for quality of life rather than for profit
