Mathematical Correspondences and Critical Editions Maria Teresa Borgato, Erwin Neuenschwander, Irène Passeron, 2019-03-22 Mathematical correspondence offers a rich heritage for the history of mathematics and science as well as cultural history and other areas It naturally covers a vast range of topics and not only of a scientific nature it includes letters between mathematicians but also between mathematicians and politicians publishers and men or women of culture Wallis Leibniz the Bernoullis D'Alembert Condorcet Lagrange Gauss Hermite Betti Cremona Poincaré and van der Waerden are undoubtedly authors of great interest and their letters are valuable documents but the correspondence of less well known authors too can often make an equally important contribution to our understanding of developments in the history of science Mathematical correspondences also play an important role in the editions of collected works contributing to the reconstruction of scientific biographies as well as the genesis of scientific ideas and in the correct dating and interpretation of scientific writings This volume is based on the symposium Mathematical Correspondences and Critical Editions held at the 6th International Conference of the ESHS in Lisbon Portugal in 2014 In the context of the more than fifteen major and minor editions of mathematical correspondences and collected works presented in detail the volume discusses issues such as History and prospects of past and ongoing edition projects Critical aspects of past editions The complementary role of printed and digital editions Integral and partial editions of correspondence Reproduction techniques for manuscripts images and formulae and the editorial challenges and opportunities presented by digital technology *Recueil Des Cours, Collected Courses*, 1962 Académie de Droit International de La Haye, Hague Academy of International Law, 1979-11-01 The Academy is a prestigious international institution for the study and teaching of Public and Private International Law and related subjects The work of the Hague Academy receives the support and recognition of the UN Its purpose is to encourage a thorough and impartial examination of the problems arising from international relations in the field of law The courses deal with the theoretical and practical aspects of the subject including legislation and case law All courses at the Academy are in principle published in the language in which they were delivered in the Collected Courses of the Hague Academy of International Law

de l'histoire de la Grande Guerre Chacun des chapitres offre une synthèse transnationale englobe tous les espaces et les temps de la guerre Les chapitres réunis dans ce deuxième volume Etats fait suite au premier volume déjà paru Combats et sera suivi par un troisième volume Sociétés De la même façon que le premier volume Etats se place au cœur du cyclone en privilégiant d'abord la compréhension par les fronts militaires celles des chefs d'Etat des diplomates et des forces armées logistiques et technologiques sans jamais oublier les hommes leur endurance et leurs refus L'étude des économies de guerre se place au plus près des ouvriers des paysans des financiers Tous ont cru que la paix et parfois la révolution couronnerait leurs efforts Mais la guerre n'a pas pris fin partout dans le monde en novembre 1918 loin de là

Bibliography of the History of Medicine, 1984 History of Nonlinear Oscillations Theory in France (1880-1940) Jean-Marc Ginoux, 2017-04-18 This book reveals the French scientific contribution to the mathematical theory of nonlinear oscillations and its development The work offers a critical examination of sources with a focus on the twentieth century especially the period between the wars Readers will see that contrary to what is often written France's role has been significant Important contributions were made through both the work of French scholars from within diverse disciplines mathematicians physicists engineers and through the geographical crossroads that France provided to scientific communication at the time This study includes an examination of the period before the First World War which is vital to understanding the work of the later period By examining literature sources such as periodicals on the topic of electricity from that era the author has unearthed a very important text by Henri Poincaré dating from 1908 In this work Poincaré applied the concept of limit cycle which he had introduced in 1882 through his own works to study the stability of the oscillations of a device for radio engineering The discovery of this text means that the classical perspective of the historiography of this mathematical theory must be modified Credit was hitherto attributed to the Russian mathematician Andronov from correspondence dating to 1929 In the newly discovered Poincaré text there appears to be a strong interaction between science and technology or more precisely between mathematical analysis and radio engineering This feature is one of the main components of the process of developing the theory of nonlinear oscillations Indeed it is a feature of many of the texts referred to in these chapters as they trace the significant developments to which France contributed Scholars in the fields of the history of mathematics and the history of science and anyone with an interest in the philosophical underpinnings of science will find this a particularly engaging account of scientific discovery and scholarly communication from an era full of exciting developments
