With Android you can do almost any computing task you can imagine. There are more than 400 000 Android applications apps to choose from. The majority of the apps are games and leisure programs. However today there are also apps for practically any type of office work and business tasks that you can imagine. Many office tasks which until recently could only be performed using a powerful PC or laptop can today easily be done using an Android tablet or smartphone. There are several excellent Android apps for word processing and spreadsheet calculations so that these and many other types of office work easily can be done on handheld Android device. This has led to a new way of working which is often called mobile computing. There are many excellent brands of Android tablets and smartphones on the market. It has highly effective and versatile built in chipsets and tools for mobile cellular data communication. Wi Fi network connections and Bluetooth communication. In addition its GPS antenna and tools make accurate location determination and navigation possible. It fits easily into any briefcase and even into a large pocket making it very easy carry around. The main challenge of mobile computing is possibly to get online in different situations in a way that is inexpensive secure and effective. While both mobile cellular broadband and public Wi Fi networks are rapidly being expanded and improved it may still now and then be difficult or expensive to connect when you are outside your carrier's coverage. If you can find a fast and inexpensive connection it may not be secure. Pediatric Hematology-Oncology in Countries with Limited Resources Daniela Cristina Stefan,Carlos Rodriguez-Galindo,2013-11-18 Typically manuals of pediatric hematology oncology are written by specialists from high income countries and usually target an audience with a sub specialist level of training often assisted by cutting

edge diagnostic and treatment facilities However approximately 80% of new cases of cancer in children appear in mid and low income countries Almost invariably general practitioners or general pediatricians without special training in oncology will look after children with malignancies who enter the health care system in these countries The diagnostic facilities are usually limited as are the treatment options The survival figures in these conditions are somewhere below 20% while in high income countries they are in the range of 80% for many childhood cancers Pediatric Hematology Oncology in Countries with Limited Resources is the only book of its kind to provide specific guidance applicable to limited resource settings and builds up from the foundation of general practitioner or general pediatrician competence Written and edited by leaders in the field this manual educates physicians on the essential components of the discipline filtered through the experience of specialists from developing countries with immediate applicability in the specific healthcare environment in these countries
