Japan's Software Factories Michael A. Cusumano, 1991-05-16 Though Japan has successfully competed with U S companies in the manufacturing and marketing of computer hardware it has been less successful in developing computer programs This book contains the first detailed analysis of how Japanese firms have tried to redress this imbalance by applying their skills in engineering and production management to software development Cusumano focuses on the creation of software factories in which large numbers of people are engaged in developing software in cooperative ways i e individual programs are not developed in isolation but rather utilize portions of other programs already developed whenever possible and then yield usable portions for other programs being written Devoting chapters to working methods at System Developing Corp Hitachi Toshiba NEC and Fujitsu and including a comparison of Japanese and U S software factories Cusumano s book will be important reading for all people involved in software and computer technology as well as those interested in Japanese business and corporate culture

TRON Project 1990 Ken Sakamura, 2012-12-06 I wish to extend my warm greetings to you all on behalf of the TRON Association on this occasion of the Seventh International TRON Project Symposium The TRON Project was proposed by Dr Ken Sakamura of the University of Tokyo with the aim of designing a new comprehensive computer architecture that is open to worldwide use Already more than six years have passed since the project was put in motion The TRON Association is now made up of over 140 companies and organizations including 25 overseas firms or their affiliates A basic goal of TRON Project activities is to offer the world a human oriented computer culture that will lead to a richer and more fulfilling life for people throughout the world It is our desire to bring to reality a new order in the world of computers based on design concepts that consider the needs of human beings first of all and to enable people to enjoy the full benefits of these computers in their daily life Thanks to the efforts of Association members in recent months a number of TRON specification 32 bit microprocessors have been made available ITRON specification products are continuing to appear and we are now seeing commercial implementations of BTRON specifications as well The CTRON subproject meanwhile is promoting standardization through validation testing and a portability experiment and products are being marketed by several firms This is truly a year in which the TRON Project has reached the practical implementation stage

NASA Tech Briefs, 1986

TRON Project 1989 Ken Sakamura, 2012-12-06 It is almost six years since the inauguration of the TRON project a concept first proposed by Dr K Sakamura of the University of Tokyo and it is almost 2 years since the foundation of the TRON Association on March 1988 The number of regular member companies registered in the TRON Association as of November 1988 is 145 which is a new record for the Association Some of this year s major activities that I would particularly like to mention are Over 50 TRON project related products have been or are about to be introduced to the marketplace according to a preliminary report from the Future Study Committee of the TRON Association In particular I am happy to say that the ITRON subproject which is

ahead of the other subprojects has progressed so far that several papers on ITRON applications will be presented at this conference which means that the ITRON specifications are now ready for application to embedded commercial and industrial products

Real Time Microcomputer Control of Industrial Processes S.G. Tzafestas, J.K. Pal, 2012-12-06 The introduction of the microprocessor in computer and system engineering has motivated the development of many new concepts and has simplified the design of many modern industrial systems During the first decade of their life microprocessors have shown a tremendous evolution in all possible directions technology power functionality I O handling etc Of course putting the microprocessors and their environmental devices into properly operating systems is a complex and difficult task requiring high skills for melding and integrating hardware and systemic components software This book was motivated by the editors feeling that a cohesive reference is needed providing a good coverage of modern industrial applications of microprocessor based real time control together with latest advanced methodological issues Unavoidably a single volume cannot be exhaustive but the present book contains a sufficient number of important real time applications The book is divided in two sections Section I deals with general hardware software and systemic topics and involves six chapters Chapter 1 by Gupta

and Toong presents an overview of the development of microprocessors during their first twelve years of existence Chapter 2 by Dasgupta deals with a number of system software concepts for real time microprocessor based systems task scheduling memory management input output aspects programming language requirements *Proceedings of the 7th International Conference on Electrical, Control and Computer Engineering—Volume 2* Zainah Md. Zain, Norizam Sulaiman, Mahfuzah Mustafa, Mohammed Nazmus Shakib, Waheb A. Jabbar, 2024-09-14 This book presents the proceedings of the 7th International Conference on Electrical Control and Computer Engineering InECCE 2023 held in Kuala Lumpur Malaysia on 22 August 2023 The topics covered are sustainable energy power electronics and drives and power engineering including distributed renewable generation power system optimization artificial computational intelligence smart grid power system protection and machine learning energy management and conservation The book showcases some of the latest technologies and applications developed to solve local energy and power problems in order to ensure continuity reliability and security of electricity for future generations It also links topics covered the Sustainable Development Goals SDGs areas outlined by the United Nation for global sustainability The book appeals to professionals scientists and researchers with experience in industry The book represents Volume 2 for this conference proceedings which consist of a 2 volume book series Magnetic Electron Lenses P.W. Hawkes, 2013-11-11 No single volume has been entirely devoted to the properties of magnetic lenses so far as I am aware although of course all the numerous textbooks on electron optics devote space to them The absence of such a volume bringing together information about the theory and practical design of these lenses is surprising for their introduction some fifty years ago has created an entirely new family of commercial instruments ranging from the now traditional transmission electron microscope through the reflection and transmission scanning microscopes to columns for micromachining and microlithography not to mention the host of experimental devices not available commercially It therefore seemed useful to prepare an account of the various aspects of magnetic lens studies These divide naturally into the five chapters of this book the theoretical background in which the optical behaviour is described and formulae given for the various aberration coefficients numerical methods for calculating the field distribution and trajectory tracing extensive discussion of the paraxial optical properties and aberration coefficients of practical lenses illustrated with curves from which numerical information can be obtained a complementary account of the practical engineering aspects of lens design including permanent magnet lenses and the various types of superconducting lenses and finally an up to date survey of several kinds of highly unconventional magnetic lens which may well change the appearance of future electron optical instruments very considerably after they cease to be unconventional **The History of the GPU - Steps to Invention** Jon Peddie, 2023-01-01 This is the first book in a three part series that traces the development of the GPU Initially developed for games the GPU can now be found in cars supercomputers watches game consoles and more GPU concepts go back to the 1970s when computer graphics was developed for computer aided design of automobiles and airplanes Early computer

graphics systems were adopted by the film industry and simulators for airplanes and high energy physics exploding nuclear bombs in computers instead of the atmosphere A GPU has an integrated transform and lighting engine but these were not available until the end of the 1990s Heroic and historic companies expanded the development and capabilities of the graphics controller in pursuit of the ultimate device a fully integrated self contained GPU Fifteen companies worked on building the first fully integrated GPU some succeeded in the console and Northbridge segments and Nvidia was the first to offer a fully integrated GPU for the PC Today the GPU can be found in every platform that involves a computer and a user interface
